

Need to design Geo Filter for Snapchat. This will be an animation to go on top of snapchat photos / videos. It is for a Beverly Hills plastic surgeon. The image is to have a slightly cartoonish feel to it and be in the style of existing snapchat geofilters (see examples and website below). The idea is to have the sun rising behind two hills that look like breasts. The contour of the image below of the hills is actually transferred from a “bird’s eye” view of a 3D scan of breasts – I’d like to keep the shape / proportions. A (relatively) flat design with possible shading / rounding of the hills is desired. I’d like the hills to be a similar blue to that of my logo (possibly darker, if it looks better...). The font should be bold, fun. I’d like to have “nipples” on the top of the hills and another version without the “nipples.” I am concerned that snapchat may not let me use the image with the Nipples.

The image should be 1080 x 1920 pixels. I’d like the image to fill the lower third of the total image.
