

# About Us

Platinum Technologies was established in early 2010 by Managing Director James Leahy. James and his carefully selected team brought over 30 years combined experience to the new company from the AV industry. Platinum Technologies appointed Kelvin Lee and Stephen Hall as CTO and Sales Director in September 2012 bringing a wealth of IT management and sales experience to the team and turning the company into a technology service provider with an AV focus.

It was James aim to grow the business organically, doing what the Platinum Technologies team does best: integrating the disparate worlds of audio-visual technology, IT, control systems and security to create intelligent homes that clients love to live in.

James success in achieving this ambition means the team has expanded to deliver a diverse range of residential and commercial projects. Where appropriate, our internal expertise is complemented by professionals with specialist skills who share our ability to build a rapport with clients.

We're proud that Platinum Technologies growth has been fuelled by repeat business and personal referrals. Our clients recommend us for our fuss-free approach to project management, the technical superiority of our work, the future proofing of our solutions and our supportive after-sales service where we are not just your average 9-5 company with our standard office hours being 7am till 8pm.

While we are based in North West London and predominantly serve clients in the capital and the South East, Platinum Technologies installations are to be found in homes and buildings across the country. Many clients choose to reproduce the success of Platinum Technologies installations in their City home by commissioning us to work on their country property or holiday home.

# What We

## Audio Visual Systems

- Easy, discreet access to all your music, wherever you are in your home or garden
- iTunes, Spotify, Internet Radio, DAB ect all supported

- Full home control using the very latest systems available
- Control of all aspects of your home from the touch of a button. Even from a mobile device on the other side of the world
- Integrate the control of Lights, Heating, Security, Audio Visual and more

## What Our Clients

Platinum Technologies undertook the planning and execution of the AV requirements of my entire house. Starting from planning through to logistics, implementation, installation and ongoing servicing of outstanding issues. They worked with a tight budget with very high-end specific requirements. The budget was implemented professionally, and when problems arose they were identified and addressed early and always offered a number of potential solutions. The timing of the job was very well implemented relative to budgeted timeline. Their positive attitude, helpfulness and positive demeanor was always appreciated throughout a tight building schedule.

Neil Phillips, Hampstead

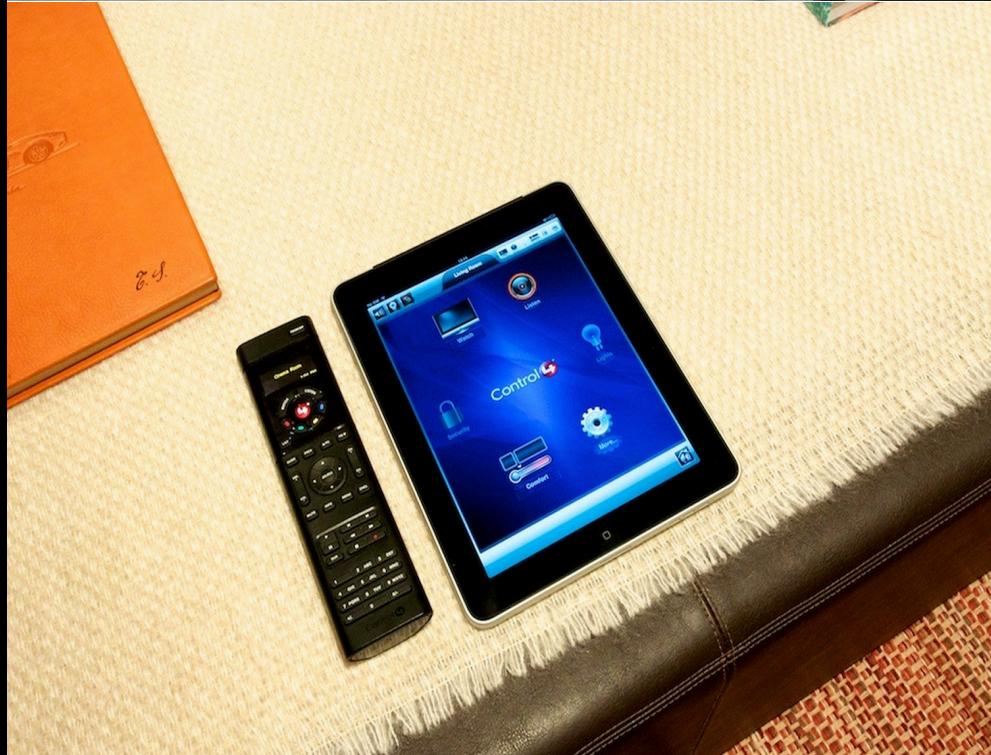

I have used Platinum Technologies over the last few years after we were recommended them for our new build project in Temple Fortune. We were recommended a system called Control4 by James, which met our brief requirement of whole house control. The system is so easy to use and makes every day control of TV's, Music, Heating and Lighting a dream. The after care they offer is also second to none no matter what time of the day or night we need them they are always there on the phone or in person and even weekends are never to much to ask. After using Platinum Technologies I would recommend them highly to anyone I know.

Benjamin Shooter, Temple Fortune

I have used James the managing director of Platinum Technologies and his team for all my audiovisual and home entertainment needs for over four years. The reason I keep going back they are reliable (always on time for appointments), very knowledgeable and have great ideas. Perhaps the most important things that I value from them: the quality of the technical advice, excellent workmanship and completely trust worthy. The recommendations are all about what will give great sound or visual quality and they won't try to get you to buy something you don't need. Lots of patience with a non-technical person that loves gadgets I would recommend them every day and anytime to anyone I know.

Michelle Bereaux, Hampstead
