

PayDock is a Level 1 PCI-DSS
Payment Service Provider

Empowering payments
ecosystems – in minutes.

PayDock provides payments freedom to
merchants desiring more revenue with less cost.

We enhance existing payment services, improve
customer experience, unlock access to new
providers and collapse administration effort.

The Problem

In today's changing payments landscape, customer demand for payment choice challenges the merchant's ability to invest in and manage necessary payment services with multiple, global or incomplete payment services.

This challenge combined with a lack of portability **erodes profit and creates risk for merchant & gateway** as customers stumble through labyrinthine payment experiences.

Merchants want
Less
payment
pain

Customers want
More
payment
methods

Gateways want
Less
feature
pressure

Traditional Solutions

There are two available choices in the market today (switch or stack). Each introduce risk and cost to the merchant while restricting future growth.

Switch
To (hopefully) a
better service

← OR →

Stack
All required
providers

Switching is slow, costly
and hidden gaps do not
emerge until it is too late.

Stacking creates brittle, expensive
and disjointed experiences for both
merchant and customer.

The PayDock Difference

PayDock removes the restrictive and costly 'switch-or-stack' dilemma. Merchants are no longer forced to choose between service providers but gain easy access to wider payment resources.

Flexible, compliant payment solutions are rapidly constructed while customers and their payment sources can be easily managed to create consistent and valuable user experiences.

Merchant Benefits

Along with a friendly API and PCI-Compliance overlays – each customer can access the following within PayDock.

Internal Level 1 compliant vault

Simplified subscriptions

Extended event tracking

No more reconciliation headaches

Centralised customer data
