

MOST people do not have access to any means of responding to Security alarms in MINUTES. Public Safety services won't attend to an alarm without visual confirmation that an event is real.

It's time for change. Introducing...

RESPONDER_{v1.0.2}

We're there, even when you're not.

Speedwell Responder is a new mobile smartphone service that provides THE FASTEST on-demand physical response to Home and Business Security alarms in the Industry. Responsiveness to alarm-triggered site inspection requests is a target of better than 10 minutes from customer request to Speedwell responder presence on-site, by utilizing an aggregated "fleet" of existing licensed and bonded security vehicles provided by existing security companies operating in the service area.

The majority of security system owners do not have the ability to request an on-demand home or business property. Moreover, even when inspection on demand is part of their service contract, their security company has limited resources committed uniquely to the one organization and may not be quickly available to respond to a request to attend an alert.

The premise of Speedwell is to provide the fastest emergency response service available, and always easily at your fingertips via your mobile phone. Speedwell will send the nearest fully-qualified security guard immediately to your premises, on demand, and billed directly to your credit card.

The entire process is tracked and audited, and full incident reports are available to the Speedwell customer on-line at the completion of each call-out for insurance purposes etc.
