In a world where TIME IS MONEY...

Increasing employee productivity by reducing the extended wait times can be your first step to increased profits...

Each business utilizes the internet differently, some reach locally and others reach globally; we work with all of our customers to have the correct speed and connectivity that meets their needs and requirements. Those same requirements are revised regularly to keep pace with constantly changing and developing business environments.

Contact one of our business specialists to develop a customized quote to meet your business's specific needs today.

Frequently Asked Questions:

Isn't satellite the fastest?

No. Typical latency with satellite service is between 900-1200ms. Enjoy the stability of our network consistently 50ms or less.

Can I use an internet based phone system?

Yes! VoIP, as it is called, does work with our service as our service is low jitter and works extremely well. Some examples are Vonage, magicJack, 8x8, Net Talk and more.

What is the commitment period for the service contract?

No contract is required for internet service.

Will my gaming work well with this service?

Yes! We have a very low latency specifically designed for real time action. Low latency equals better gaming performance.

How can I verify the speed I am getting from my current provider?

Several on-line services provide speed tests to check actual performance. We use **speakeasy.net/speedtest** because we have found it to be the most accurate.
