

Pandu Solutions

What is Pandu

Pandu Solutions is an IT consultancy firm with a difference
We can provide IT expertise for your business at any stage - from initial idea to live systems

Software development

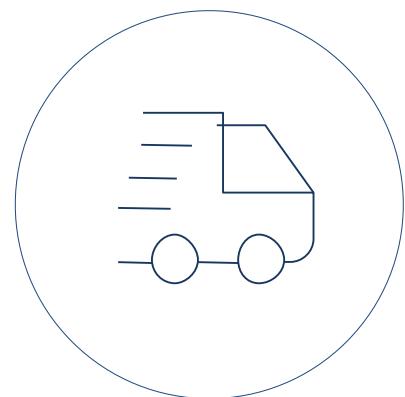

IOT System Design

Machine learning solutions

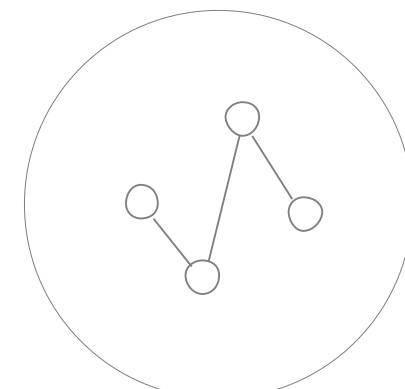

How can we help

Acquire more development capacity and get results fast

Avoid the overhead incurred by frequent scaling of your development team

Reach a wide spectrum of expertise

A dark, moody photograph of a person sitting on a rocky outcrop. The person is a dark silhouette against a vibrant, colorful sky. The sky is filled with horizontal bands of color, transitioning from deep blues and purples at the top to bright oranges and yellows near the horizon. The person is positioned on the left side of the frame, looking out over the landscape. The foreground is dominated by the dark, silhouetted shapes of rocks and hills.

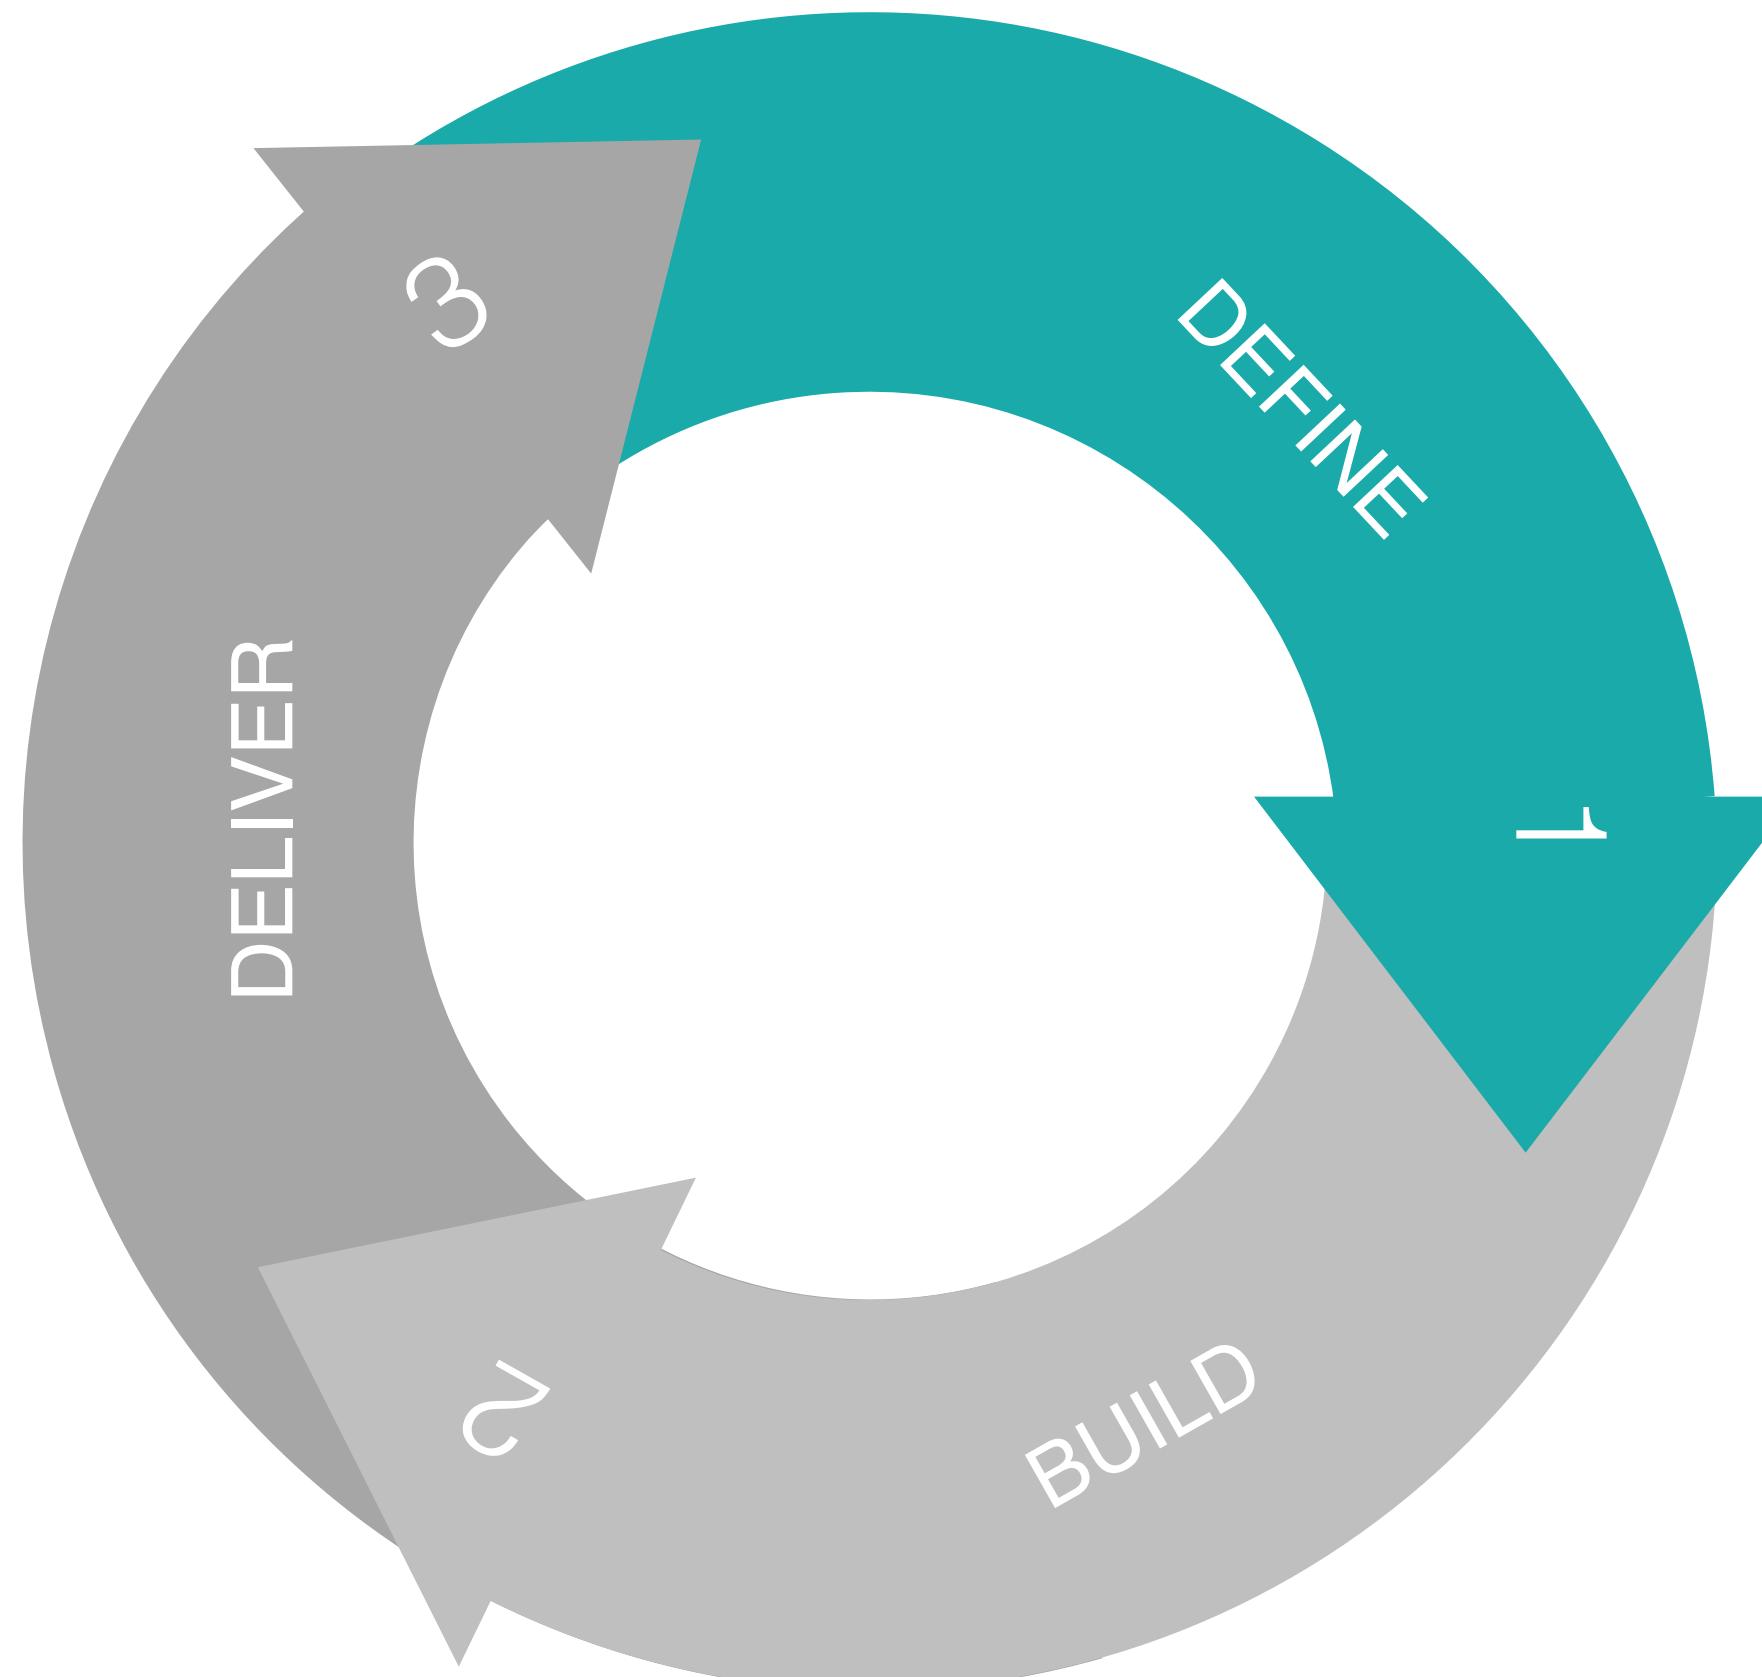

How are we different

Clear Accountability

Project Point Person
Responsible and accountable
for deliverables and communication

Iterative Agile Process

Define

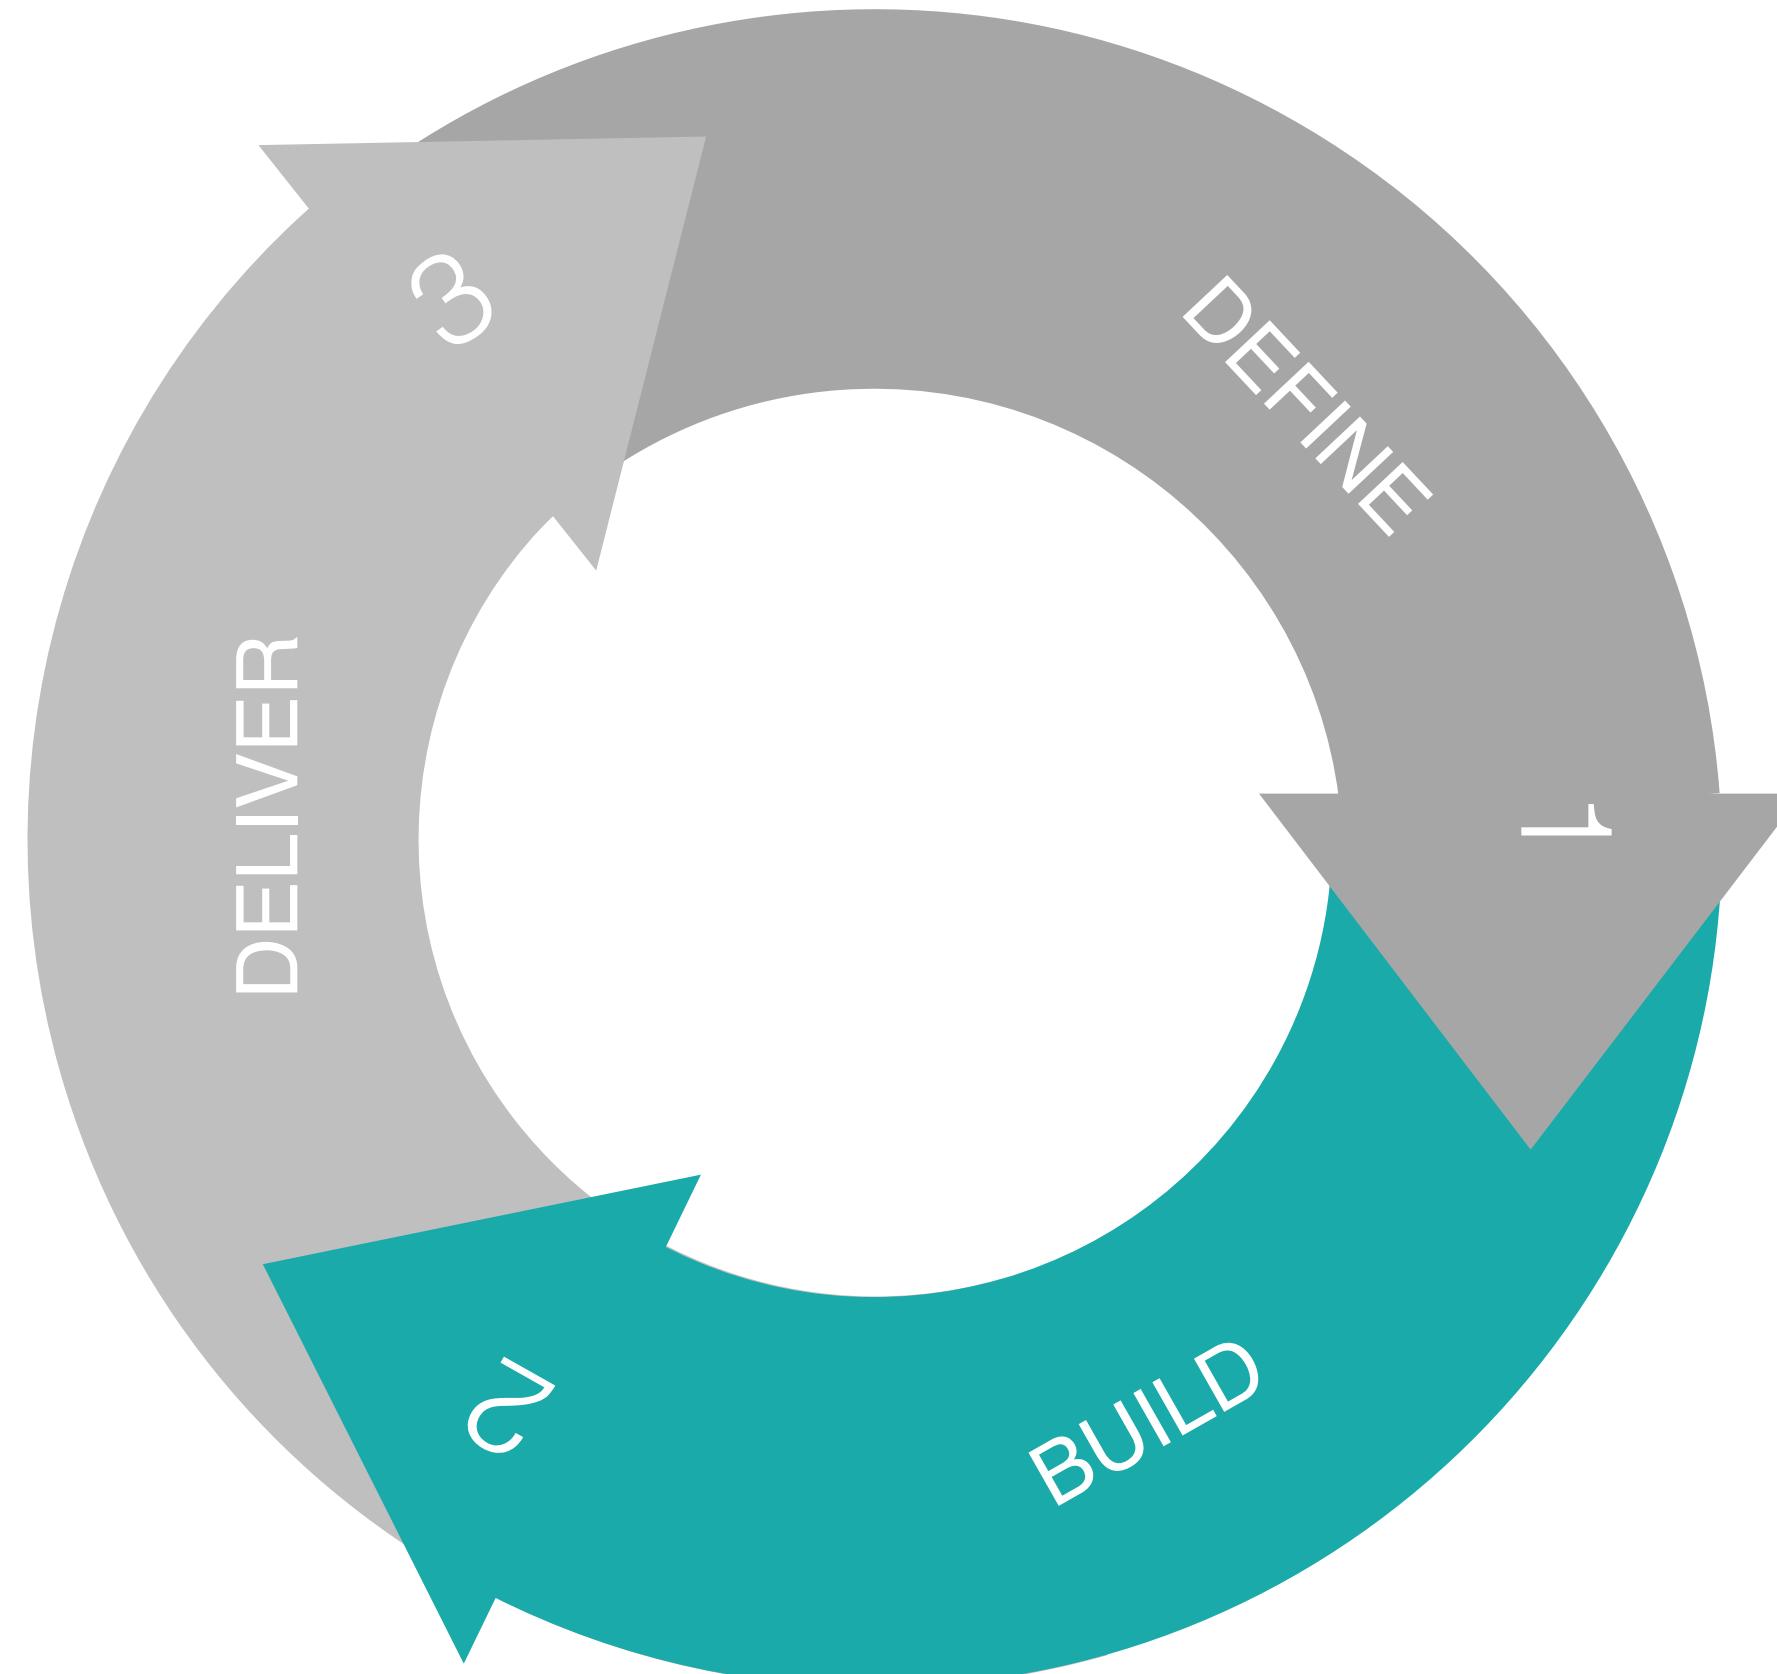

Our conversation will start with a high-level agreement on the overall strategy.

Our tech team will research and investigate the context of the work. This includes understanding of your product and your business needs.

We agree on a clear definition of deliverables which are broken down to multiple milestones

No commitment needed for this stage

Iterative Agile Process

Build

We follow a scrum methodology in our development process, that is, we carry out the work in multiple (bi-)weekly sprints. At the end of each sprint:

- A) Your tech team can be involved in code review to avoid “knowledge island” issues.
- B) Your business/product person can review the product progress. So we can get your feedback early and you are assured that progress is made towards the right direction

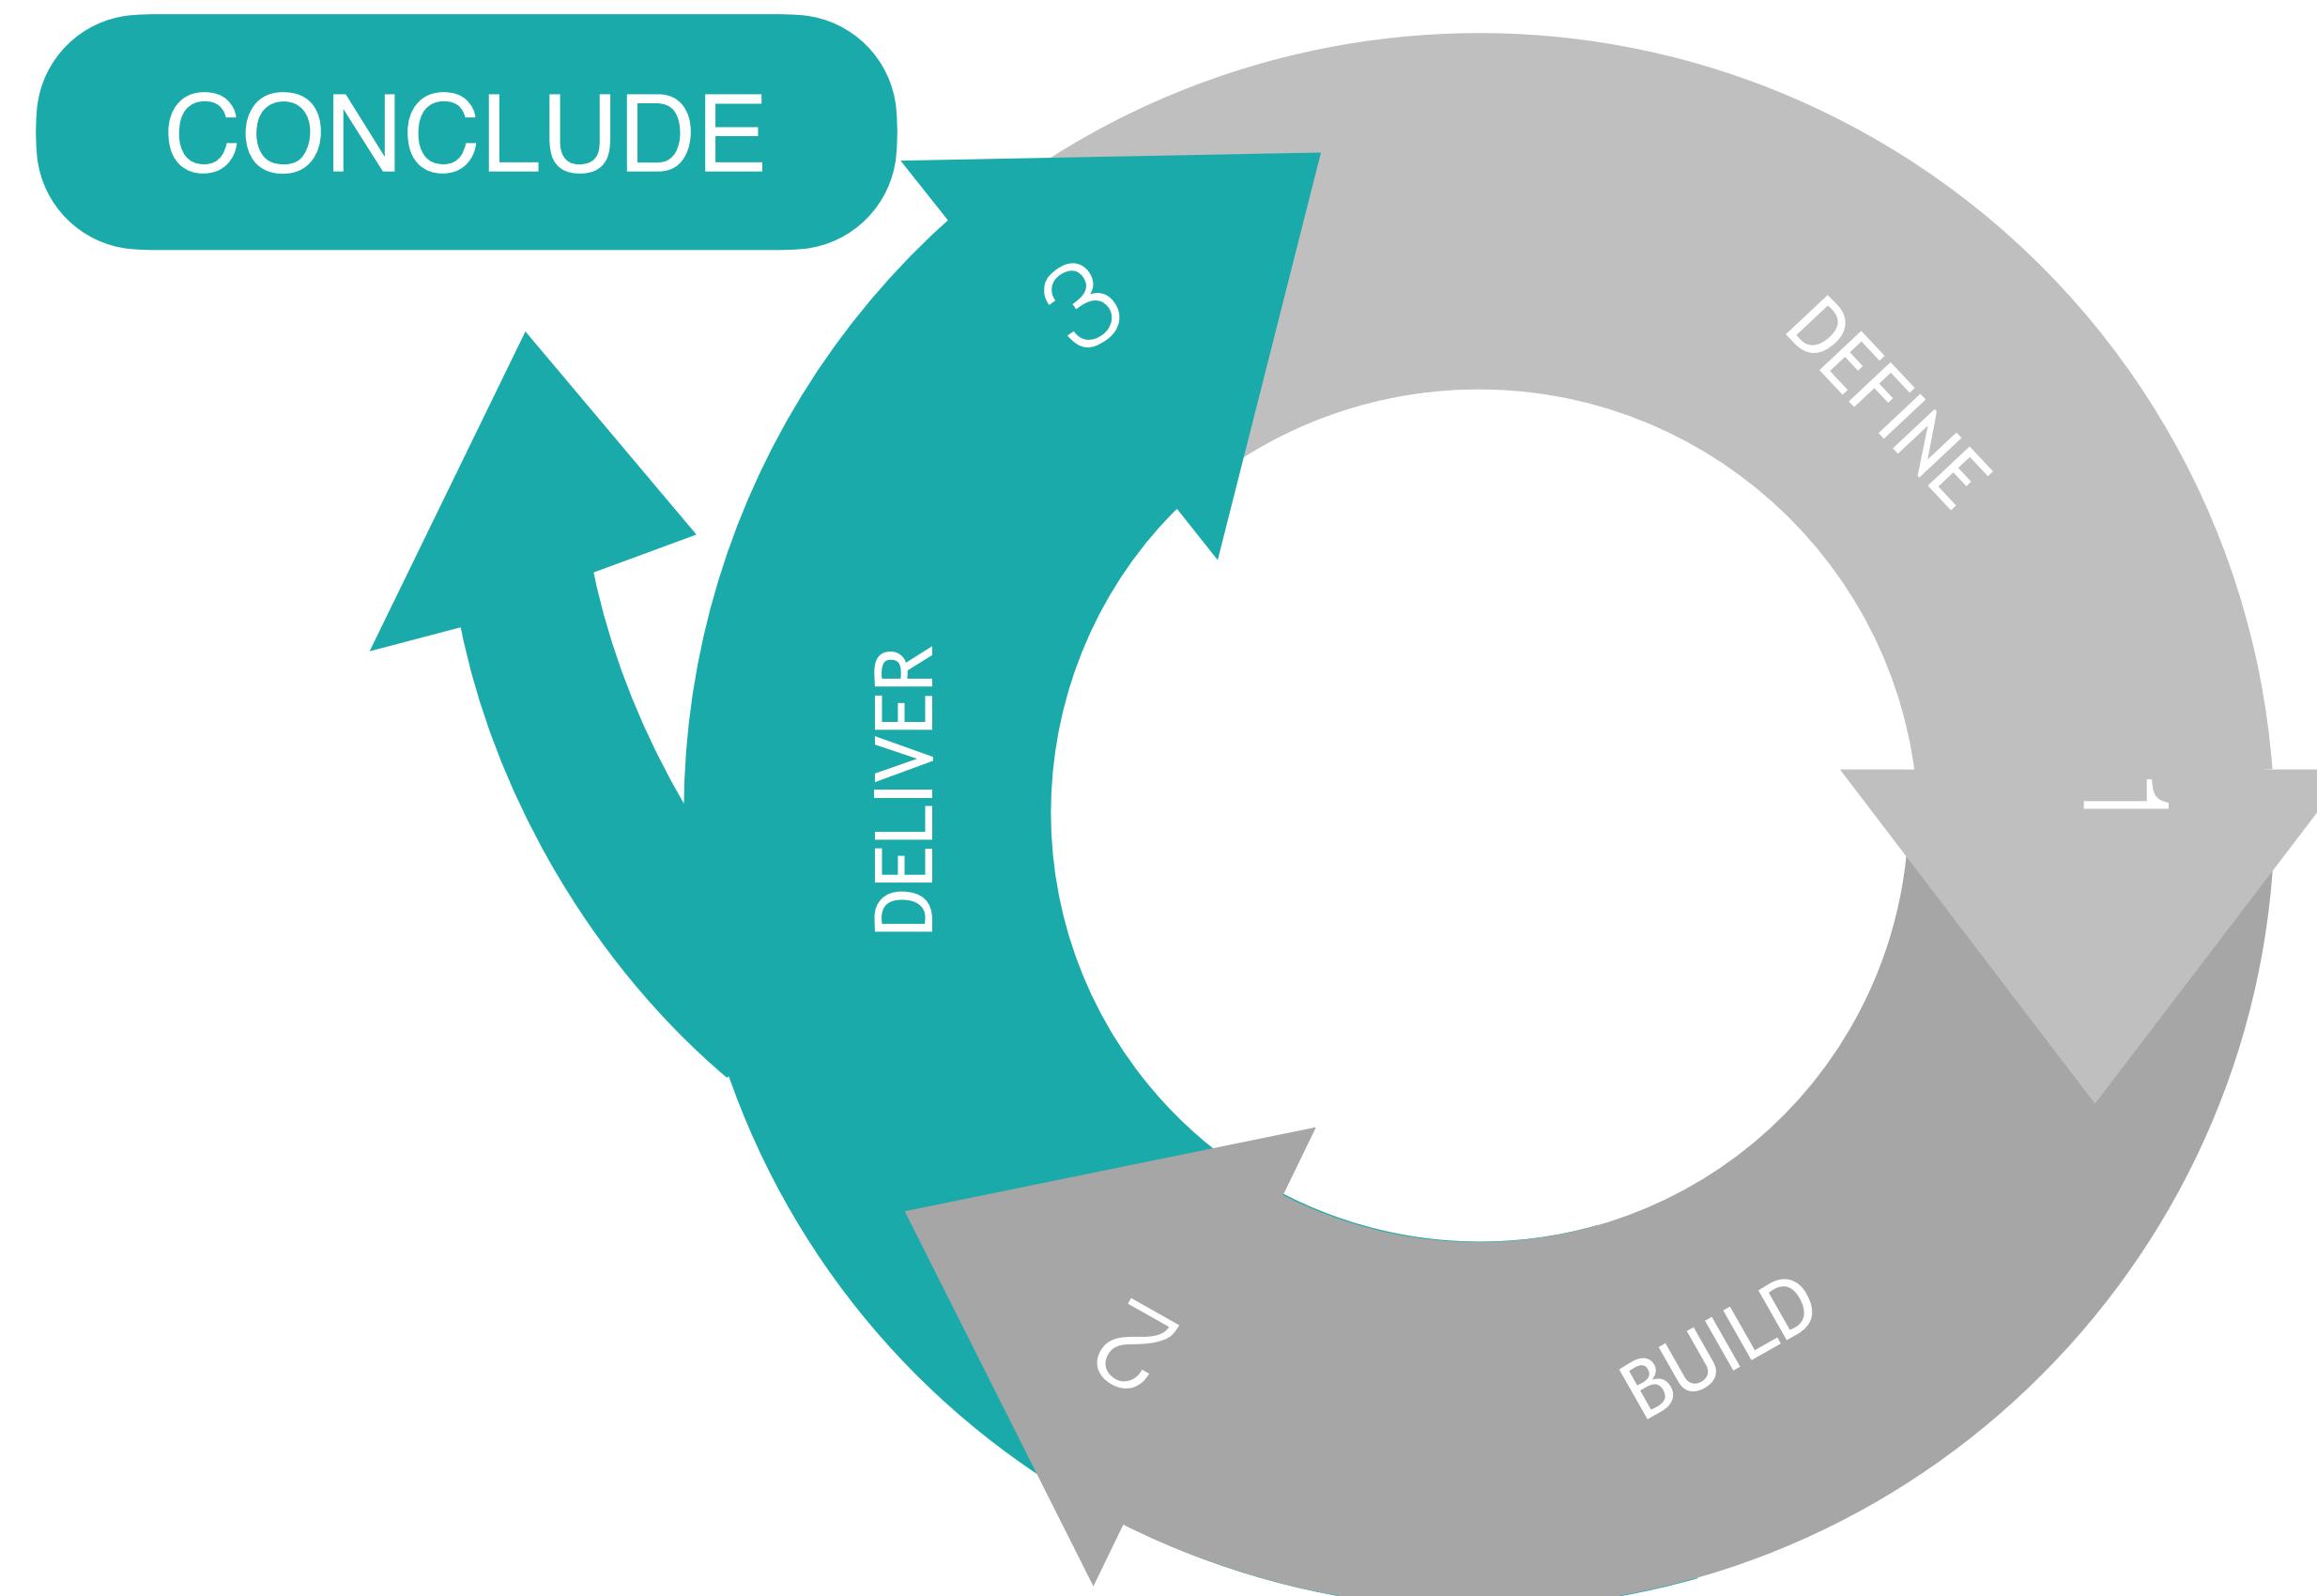

Iterative Agile Process

Deliver

At the end of a contract, we ship deliverables with sufficient documentations. In addition, we will provide free support and maintenance for a period of time depending on the complexity of the development

The ultimate goal is to help your business, we certainly hope to build a long-term relationship where we can continuously add value to your business.

Strong Expertise

We have many years experience in machine learning, data mining, app development, DevOps and hardware design

We solve “hard” problems for business
