Thea Center for Regenerative

Regenerative medicine is the **medicine of the future.**

### **It is time that we go back to the origin.**

Instead of throwing drugs to target a few simple links we've managed to understand, it is time that we use the full intelligence of nature to address the web of relationships in the body.

Regenerative medicine uses the natural healing mechanisms of the body, be it stem cells, growth factors, hormones or other agents, to help the body repair and regenerate...

Our center stays at the forefront of regenerative medicine, firmly grounded in the the latest scientific knowledge, clinical evidence and cutting-edge technology.

## [About](#)

THEA Center for Regenerative Medicine focuses on cutting-edge cell therapy in order to: **relieve sufferings** for people with chronic & degenerative conditions, and **optimize health** to help everyone achieve a younger and a more vibrant life.

### Founder & Medical Director of Thea CRM

Joy Kong, M.D.

Graduated as a valedictorian from San Francisco State University, Dr. Kong completed her medical training at UCLA School of Medicine. As the result of her intense interest in the human brain, she specialized in psychiatry, and worked at a Veterans Affairs hospital and LA county hospital, and helped countless patients in dire needs. While working in the hospital ER and in county clinics, she realized the futility of trying to treat someone without examining the person in a holistic manner, which lead to her interest in integrative medicine. She believes in respecting the complexity of our own microcosm and taking into the account its interactions with the environment. She implemented such holistic approaches while being the medical director of several alcohol & drug rehab centers in Los Angeles.

As she became more familiar with the discipline of anti-aging medicine, she fully embraced its principles of addressing the complex interlinking factors that contribute to declines in the aging process. She became very passionate about regenerative medicine because of the transformative power it brings, and the sound science it is based on. She achieved remarkable success in helping her own patients using regenerative medicine, in many cases people who could not get better for years despite of seeking help from various specialists. Dr. Kong is keen on keeping up with the latest scientific discoveries and technology, and consulted with many regenerative medicine experts from around the world, and has lectured internationally on stem

cell therapy. Dr. Kong is dedicated in educating other physicians on the principles and implementation of regenerative medicine, so a great many more people can be helped.

Dr. Kong is a member of American Academy of Anti-Aging Medicine, certified in advanced cellular therapeutic protocols, is board-certified by American Board of Psychiatry and Neurology, and American Board of Addiction Medicine.

## Services

**Chronic illnesses** - most modern chronic illnesses and degenerative conditions are inflammation-based. If we can address the rampant inflammation in the body, rebalance the immune system, effective healing can occur. Our center is equipped with addressing the multitude of factors at play using our advanced cell therapy protocols.

**Neurodegenerative conditions** - most of these patients suffer from significant inflammation in the brain, such as many forms of dementia, multiple sclerosis, Parkinson's disease, post-concussion or stroke victims. Our center employs cutting-edge cell therapy that allows efficient delivery into the central nervous system.

**Skin rejuvenation & Hair restoration** - skin ages and hair loss occur partially because we ran out of stem cell in our skin and scalp, and the remaining ones are sluggish. Our center utilizes unique technology that allows delivery of cell therapy agents to appropriate depths of the skin or scalp, where repair & regeneration can occur the most effectively.

**Male enhancement** - modern day has seen significant declines in male testosterone levels as well as erectile dysfunction (ED), which mostly have to do with lifestyle and inflammation. At our center, we address various contributing factors, and utilize state-of-the-art therapy to help enhance sexual function, and reverse some of the causes that lead to ED.

**General Antiaging** - we cannot help our decline when we age, as our telomere shorten, our hormones decline, the toxic exposure accumulate, and cellular repair slows down. Our center specializes in dissecting the various hidden factors that may cause decline for an otherwise healthy individual. Cell therapy is a crucial component to this antiaging regimen.

## Science

Please use the same information as in <https://www.charabiologics.com/science/> (it includes Basics and Research, and Thea CRM site should use the exact same)

## Contact

5850 Canoga Ave., Suite 400
