

Briefing to Design two icons (Mount and Accessory)

We have an online shop and we sell boat accessories for various items such as smartphones, tablets, rods or cameras.

Every boat accessory needs a holder. We have several types of holders in our system. They differ due to the different types of fastening on the boat.

Thus, a complete system (Set) always consists of 2 parts (1 x boat accessory + 1 x holder) - Please see first image.

- **1. Part** is a holder which must be attached to the boat. (There is a star-shaped hole)
- **2. Part** is the boat accessory (with a star adapter which is inserted into the star-shaped hole and locked).

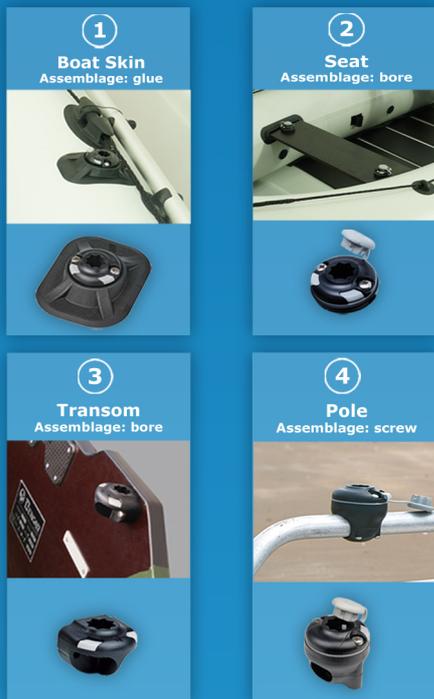

The icons are placed on the cover image of each product.

There are thus 3 different types:

1. Each Mount-Product gets the icon holder on its cover image
2. Each Accessory-Product gets the icon accessory on its cover image
3. Set Products (The complete System) gets both icons (mount + accessory) on its cover image

There are 4 kinds of mounts

These can be installed at different places on your boat.

It allows you the attachment of all accessories of RailBlaza.
