2019 BMF/3 TELEMARK BINDING

THE MIGHTY BEACON ON THE MOUNTAIN

Shining brightly over other designs, the BMF/3 is the mighty beacon, lighting the path for the rest to follow. The machined metals, refined lines, and splash of color, come together with the beauty of a ballerina and the force of a fighter jet.

Step into the BMF/3 and find your flow like never before.

2019 BMF/3 TELEMARK BINDING

[continued]

THE DETAILS:

- Intuitive "alpine style" step-in / step-out means no more bending over
- The Real Heel Feel: All BMFs go from toe-to-heel, giving you more power than any other tele binding and a more natural boot flex
- Brake included: 90, 100, 115, or 125mm
- NTN or 75mm boot compatibility. NOTE: This binding requires a heel with a shelf. For example, it does NOT work with older Crispi CXR and CXX boots.
- Spring tension is easily adjusted on the hill with a turn of a screw
- Weight: 1890 g - one size fits all (the brakes add 170 g)
- Does NOT include or work with climbing wires. Only the BMF/R has those.
- 75mm version has a dedicated LEFT and RIGHT binding. The teardrop hole in the Toe Cage should point to the outside of your ski.
- Bishop's Satisfaction Guarantee

Oh, and those 75mm duck bill boots that fit like a glove – keep 'em! The BMF's come in 75mm or NTN – with the option to change it down the road with our NTN Upgrade Kit.

NEW FOR 2019

- 30% more flex for deeper telemark turns (i.e. more face shots)
- Improved Switch Plate Technology™ with Spirallock® threads for quick and secure transfer across multiple pairs of skis
- Softer Spring Kit allows you to further customize your bindings to your liking
- Improved heel lock and heel bracket
- Burlier toe cage and toe cage cover
- Carbon fiber components are lighter and more durable

Strength

ARMAGEDDON-PROOF. TESTED. TRIED AND TRUE. Bishop's products are all made with the same agenda: to be the gold standard in Badassery, performing and powering beyond the rest. Seriously, the tooth and nail testing each design undergoes would make a stunt double cringe. Step into a pair of BMF/R bindings and feel every ounce of applied force transferred from your legs to the snow. No other bindings are as bomb-proof as Bishops. Now go forth and shred.

2019 BMF/R TELEMARX BINDING

THE GOLD STANDARD IN BADASSERY

~~Bishop's products are all made with the same agenda: to be the gold standard in Badassery, performing and powering beyond the rest.~~

Step into a pair of BMF/R's and feel every ounce of applied force transferred from your legs right to the snow, and with 60 degrees of free touring, you'll think you're walking on a cloud to pow-town.

We are all Badassadors, hellbent on spreading the good word of the Sacred Snow and the BMF/R is our mighty sword. Now go forth and shred.

NEW FOR 2019

- Redesigned tour throw for easier transitions from tour to tele
- Reinforced touring mechanism housing
- 30% more flex for deeper telemark turns (i.e. more face shots)
- Improved Switch Plate Technology™ with Spirallock® threads for quick and secure transfer across multiple pairs of skis
- Optional Soft Spring Kit allows you to further customize your bindings to your liking
- Improved heel lock and heel bracket
- Burlier toe cage and toe cage cover
- Carbon fiber components are lighter and more durable

2019 BMF/R TELEMAR BINDING

(continued)

THE DETAILS:

- 60 degrees of resistance-free touring mode (55 degrees for 75mm boots)
- Rock-solid "Lock Wedge" ski-mode means no play or slop
- 7 and 14 degree heel risers
- Simple, accessible lever to switch from ski mode to touring mode
- Intuitive "alpine style" step-in / step-out means no more bending over
- Brake options: 90, 100, 115, or 125mm
- NTN or 75mm boot compatibility
- NOTE: This binding requires a heel with a shelf. For example, it does NOT work with older Crispi CXR and CXX boots.
- Spring tension is easily adjusted on the hill with the a turn of a screw
- Weight: 1900 g - one size fits all (the brakes add 170 g)
- 75mm version has a dedicated LEFT and RIGHT binding. The small leash hole in the Toe Cage should be on the outside.
- Bishop's Satisfaction Guarantee

Oh, and those 75mm duck bill boots that fit like a glove – keep 'em! The BMF's come in 75mm or NTN – with the option to change it down the road with our NTN Upgrade Kit.

Precision

HARNESS THE FORCE OF NATURE LIKE NEVER BEFORE. The purpose of hardware is to keep two things together and to transfer applied energy in an efficient way. Such is the main objective of our engineering department: to reliably take every ounce of energy you exert and apply it to the snow. Back at the shop, nothing gets the crew more amped up than a debate on biomechanics or stress testing. From material selection to the profiles of CNC-machined components, everything Bishop makes is engineered with intention and precision.

2019 CHEDI

CHEDI IS BACK, AND Badder THAN EVER
Now Available in 164cm

Named after Dave's Bernese Mountain Dog, Chedi, this ski is a hard-charging, fun-loving, all-mountain companion. A daily driver with an early rise tip, camber underfoot, and a flat tail with "release rocker", make the Chedi a blast to ski. It delivers the perfect balance of float, stability at speed, and playful performance.

BMF/3 + CHEDI

BMF/R + CHEDI

2019 CHEDI

[continued]

THE DETAILS:

- 130mm tip | 100mm waist | 116mm tail
- 184cm: 25m turn radius
- 174cm: 23m turn radius
- 164cm: 20m turn radius
- Designed for 100mm wide ski brake
- ~~Early rise~~ tip
- Camber underfoot
- Poplar wood core is lightweight, snappy, and strong
- Dual Triaxial Fiberglass reinforcement
- Elastomeric dampening
- Hex-Tech Premium top sheet
- Flat tail section for skin clips
- Weight per pair: 3270g, (164cm), 3450g (174cm), 3630g (184cm)
- Handmade in Colorado, USA
- Backed by Bishop's Satisfaction Guarantee

Legitimacy

LIVE IT. LOVE IT. BE IT. We are a team of mountain town ski nerds who push the limits both on the slopes and in the shop. We are engineers. We are Colorado's outdoor junkies. We are all Badassadors, hellbent on spreading the good word of the Sacred Snow. We push the limits of physics in every design we test. If something breaks, we adjust and try again. And again, and again, and again. All until a radically new product is ready for your hungry eyes, and only then will we serve you. Find your place at the table, dinner is served and Bishop is the main course.

2019 GONZO

BEHOLD THE NEWEST ADDITION: GONZO

~~"It was the third week of January, the last three days were such a blur, savage après hangovers could only be cured by chairlift rides and nimble tours outside the gates. My head was throbbing, but the dark lens of my goggles kept me focused on the trail ahead and the strength in my legs felt amplified. Ever-lasting powder fields led to savory turns down the steep terrain. Like a ballerina flying a fighter jet, it was titillating, just.. pure... GONZO."~~

With the help of Bishop athlete, Andreas Sjöbeck, we've created the ultimate all-around ski for your longest tours and playground fantasies. A progressive shape with blunted tail will allow for both switch landings and optimum tail clip anchoring. The perfect width and turning radius for delivering quick carved turns, navigating tight bumps, and shredding the trees on the dreamiest of days. The Gonzo is everything you've wanted in an all-mountain ski. Pure. Fire.

BMF/3 + GONZO

BMF/R + GONZO

2019 GONZO

[continued]

THE DETAILS:

- 125mm tip | 90mm waist | 120mm tail
- 170cm: 14m turn radius
- 180cm: 16m turn radius
- Designed for our 90mm ski brake
- Camber underfoot
- Progressive twin shape for all-mountain domination
- Poplar wood core is lightweight, snappy, and strong
- Dual Triaxial Fiberglass reinforcement
- Elastomeric dampening
- Hex-Tech Premium top sheet
- Blunted Twin Tail, for optimum skin clip grip
- Weight per pair: 3100g, (170cm), 3300g (180cm)
- Handmade in Colorado, USA
- Backed by Bishop' Satisfaction Guarantee

NOTE: The Boot Center (BC) mark on this ski is set for a very progressive, freeride and park "Sjoberg" style of freeheel skiing. If you don't ride switch or get into the park very often we suggest mounting 2 cm behind the BC mark. For a more traditional freeheel mount you can go up to 3 cm behind the BC mark.

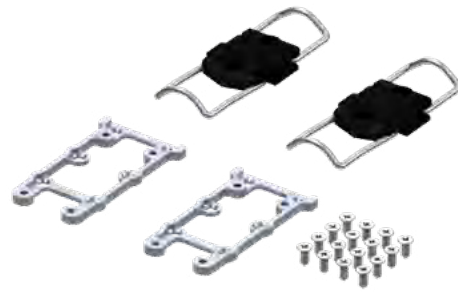

NTN UPGRADE KITS

~~NEW FOR 2019: We did a ton of precision engineering analysis and design to optimize the toe area for this year to make them even stronger with better energy transfer.~~

If you want to make the switch from 75mm "duck bill" to NTN boots, simply unbolt your BMFs from your switch plate and send them to Bishop HQ. We will install the new toe as well as perform a full binding inspection to repair or replace any worn parts if needed. We then lather on a layer of Binding Butter, and complete a full tune up of your bindings. They will be ready to soar like a fighter jet with grace and style.

~~We recommend that you send them to us, although we do understand that there are certain circumstances that will make that difficult, so in those cases we will offer the parts to ship.~~ Unless you are a do it yourself person with mechanical skills, we suggest letting the experts take care of it.

SWITCH KITS

~~Improved~~ Heavy Duty Switch Plate Technology™ with Spirallock® threads for quick and secure transfer across multiple pairs of skis.

~~Now even more burly,~~ the BMF HD Switch Kit allows you to quickly transfer your bindings between multiple pairs of skis. Invest in one burly beautiful Bishop binding and spread the love across your entire quiver, almost cutting the cost in half or more. No need to have a pair of bindings for each set of skis.

The BMF/R Switch Kit comes with climbing wires, and the BMF/3 Switch Kit does not. You can not use climbing wires with the resort oriented BMF/3 binding. ~~These are not compatible with Bishop 2.0 bindings. A 2.0 Switch Kit is available for that binding.~~

2019 ACCESORIES

[continued]

BMF BRAKES

~~NEW for 2019, we've added a 90mm brake width.~~ Bishop telemark ski brakes can be easily installed or removed with two screws that hold the brake cover in place on the binding ~~(extra screws included).~~ Four brake sizes to choose from to fit your rig. It is possible to bend the brakes out ~~or in~~ a bit for a ski that is a few millimeters wider ~~or narrower~~ than the brake, ~~to get the brake as close as possible to the ski edge without interfering.~~

Sold as a pair of two [2] brakes.

BINDING BUTTER

Keep your Bishops running smooth and fast with our low temperature grease specially formulated for snowy cold conditions.

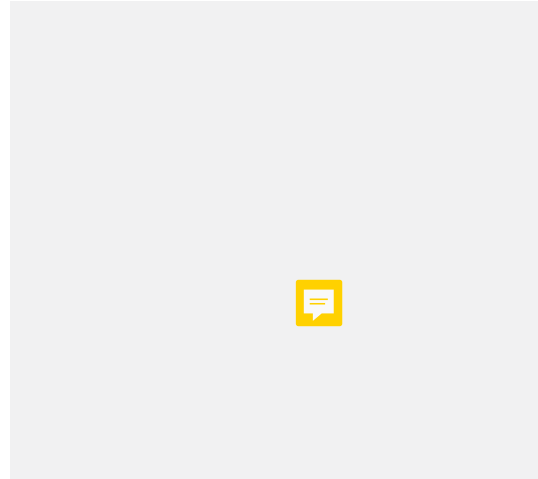

Bishop ~~freeheel~~ bindings are a precision piece of equipment, and needs a little maintenance love every so often. This low temperature grease is used on the Main Springs, Touring and main pivot of the BMFs, and on the Bishop 2.0 at the main pivot and bolts that attach the Heel Bail to the Heel Pad. In addition, it can also be used on the outside of the Main Tubes in very cold conditions to reducing icing. You can also spray a little WD-40 on the tubes to drive out moisture and reduce icing ~~on very cold days.~~

BMF SOFTER SPRING KIT

Everybody is different, and ~~we understand that~~, if you're a lighter skier or just love that ~~knee to the ski turn~~, we've developed a softer and more responsive spring to customize your new bindings to your turn. Four pre-buttered springs and improved spring plugs are included.

These springs are 30% softer than our standard spring. They will give you a lighter feel, quicker lead changes, and allow you to flex your bindings a bit further.

75MM UPGRADE KITS

Don't like your NTN boots? If you want to make the switch from NTN boots back to you comfy, tried and true 75mm "duck bill", simply unbolt your BMFs from your switch plate and send them to Bishop HQ. We will install the new parts as well as perform a full binding inspection to repair or replace any worn parts if needed. We then lather on a layer of Binding Butter, and complete a full tune up of your bindings.

We recommend that you send them to us, although we do understand that there are certain circumstances that will make that difficult, so in those cases we offer the parts to ship. Unless you are a do it yourself person with good mechanical skills, we suggest letting the experts take care of it.
