BMF/3 TELEMARK BINDING

THE MIGHTY BEACON ON THE MOUNTAIN

Shining brightly over other designs, the BMF/3 is the mighty beacon, lighting the path for the rest to follow. The machined metals, refined lines, and splash of color, come together with the beauty of a ballerina and the force of a fighter jet.

Step into the BMF/3 and find your flow like never before.

BMF/3 TELEMARK BINDING

(continued)

NEW FOR 2020

- Third generation Heel Lock, Toe Cage Cover and brake cover optimized and improved for performance and our legendary durability
- HD Switch Plate redesigned with additional ski screw holes for improved ski retention

THE DETAILS:

- Intuitive "alpine style" step-in / step-out means no more bending over
- The Real Heel Feel: All BMFs go from toe-to-heel, giving you more power than any other tele binding and a more natural boot flex
- Brake options included: 90, 100, 115, or 125mm
- Softer Spring Kit allows you to further customize your bindings to your liking
- Boot flex spring tension is easily adjusted on the hill with any screwdriver or tool
- Carbon fiber composite components for lightweight durability
- Weight: 1890 g - one size fits all (the brakes add 170 g)
- Does NOT include or work with climbing wires. Only the BMF/R has those
- Bishop's Satisfaction Guarantee

Oh, and those 75mm duck bill boots that fit like a glove – keep 'em! The BMF's come in 75mm or NTN – with the option to change it down the road with our NTN or 75mm Upgrade Kit.

Strength

ARMAGEDDON-PROOF. TESTED. TRIED AND TRUE. Bishop's products are all made with the same agenda: to be the gold standard in Badassery, performing and powering beyond the rest. Seriously, the tooth and nail testing each design undergoes would make a stunt double cringe. Step into a pair of BMF/R bindings and feel every ounce of applied force transferred from your legs to the snow. No other bindings are as bomb-proof as Bishops. Now go forth and shred.

BMF/R TELEMARK BINDING

THE GOLD STANDARD IN BADASSERY

Step into a pair of BMF/R's and feel every ounce of applied force transferred from your legs right to the snow, and with 60 degrees of free touring, you'll think you're walking on a cloud to pow-town.

We are all Badassadors, hellbent on spreading the good word of the Sacred Snow and the BMF/R is our mighty sword. Now go forth and shred.

BMF/R TELEMARK BINDING

- Softer Spring Kit allows you to further customize your bindings to your knee dropping style
- Boot flex spring tension is easily adjusted on the hill with any screwdriver or tool
- Carbon fiber composite components for light-weight durability.
- Weight: 1900 g - one size fits all (the brakes add 170 g)
- Bishop's Satisfaction Guarantee

Oh, and those 75mm duck bill boots that fit like a glove – keep 'em! The BMF's come in 75mm or NTN – with the option to change it down the road with our NTN or 75mm Upgrade Kit.

Precision

HARNESS THE FORCE OF NATURE LIKE NEVER BEFORE. The purpose of hardware is to keep two things together and to transfer applied energy in an efficient way. Such is the main objective of our engineering department: to reliably take every ounce of energy you exert and apply it to the snow. Back at the shop, nothing gets the crew more amped up than a debate on biomechanics or stress testing. From material selection to the profiles of CNC-machined components, everything Bishop makes is engineered with intention and precision.

CHEDI

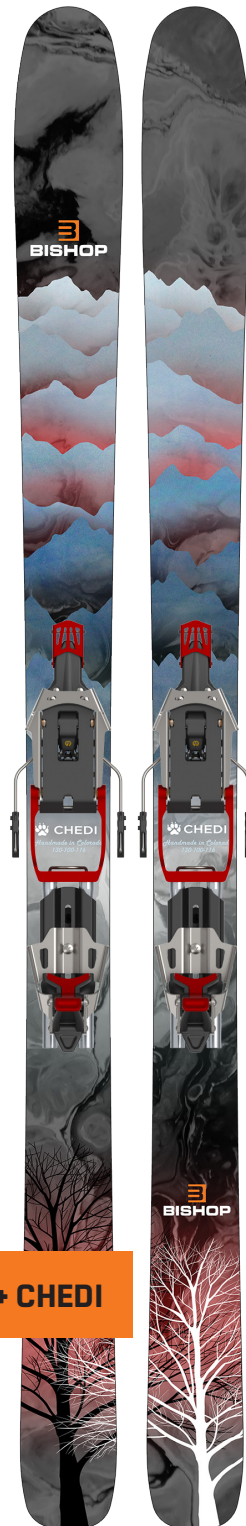

THE CHEDI IS YOUR QUIVER OF ONE

Named after Dave's Bernese Mountain Dog, Chedi, this ski is a hard-charging, fun-loving, all-mountain companion. A daily driver with rocker at the tip, camber underfoot, and a flat slightly stiffer tail to power through a tele turn ~~but with slight "release rocker" to ease transition into the next turn~~, make the Chedi a blast to ski. It delivers the perfect balance of float, stability at speed, and playful performance.

2020 graphics subject to change.

BMF/3 + CHEDI

BMF/R + CHEDI

CHEDI [continued]

THE DETAILS:

- 130mm tip | 100mm waist | 116mm tail
- 184cm: 25m turn radius
- 174cm: 23m turn radius
- 164cm: 20m turn radius
- Designed for 100mm wide ski brake
- Rocker at the tip for easy powder turns
- Camber underfoot
- Poplar wood core is lightweight, snappy, and strong
- Dual Triaxial Fiberglass reinforcement
- Elastomeric dampening
- Hex-Tech Premium top sheet
- Flat tail section for skin clips
- Weight per pair: 3270g, (164cm), 3450g (174cm), 3630g (184cm)
- Handmade in Colorado, USA
- Backed by Bishop's Satisfaction Guarantee

The BMF/3 + Chedi is designed for the resort focused telemark skier who wants a quiver of one ski that will give you confidence in powder, frontside groomers and everything in between.

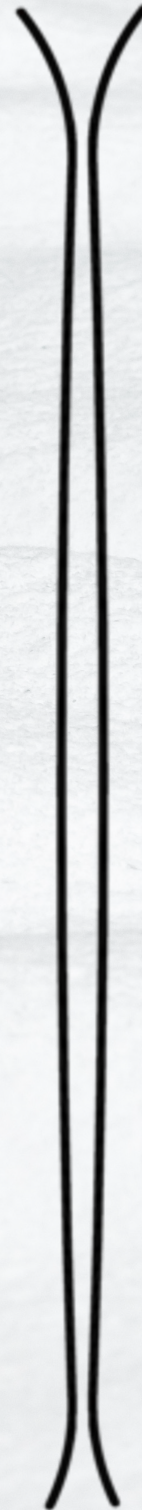

The BMF/R + Chedi is designed for the telemark skier who loves getting into the backcountry, and wants a quiver of one that gives you confidence in powder, frontside groomers and everything in between.

Legitimacy

LIVE IT. LOVE IT. BE IT. We are a team of mountain town ski nerds who push the limits both on the slopes and in the shop. We are engineers. We are Colorado's outdoor junkies. We are all Badassadors, hellbent on spreading the good word of the Sacred Snow. We push the limits of physics in every design we test. If something breaks, we adjust and try again. And again, and again, and again. All until a radically new product is ready for your hungry eyes, and only then will we serve you. Find your place at the table, dinner is served and Bishop is the main course.

GONZO

BEHOLD THE NEWEST ADDITION: GONZO

With the help of Bishop athlete, Andreas Sjöbeck, we've created the ultimate all-around ski for your spring tours, dominating the groomers, bumps, trees, and playground fantasies. A progressive shape with blunted tail will allow for both switch tele turns and landings. For touring we put a flat section on the tail for your skins to stay secured. The perfect width and turning radius for delivering quick carved turns, navigating tight bumps, and shredding the trees on the dreamiest of days. The Gonzo is everything you've wanted in an all-mountain ski. Pure. Fire.

BMF/3 + GONZO

BMF/R + GONZO

GONZO [continued]

THE DETAILS:

- 125mm tip | 90mm waist | 120mm tail
- 170cm: 14m turn radius
- 180cm: 16m turn radius
- Designed for our 90mm ski brake
- Camber underfoot
- Progressive twin shape for all-mountain domination
- Poplar wood core is lightweight, snappy, and strong
- Dual Triaxial Fiberglass reinforcement
- Elastomeric dampening
- Hex-Tech Premium top sheet
- Blunted Twin Tail, for optimum skin clip grip
- Weight per pair: 3100g, (170cm), 3300g (180cm)
- Handmade in Colorado, USA
- Backed by Bishop's Satisfaction Guarantee

The BMF/3 + GONZO is designed for the lift resort focused telemark skier who wants a quick turning, carving, switch riding ski that will give let you rip the woods, bumps, park, groomers, and get more face shots in the powder.

The BMF/R + GONZO is designed for the telemark skier who loves getting into the backcountry with a lighter and narrower ski and also wants a quick turning, carving, switch riding ski that will let you rip the woods, bumps, park, groomers, and get more face shots in the powder.

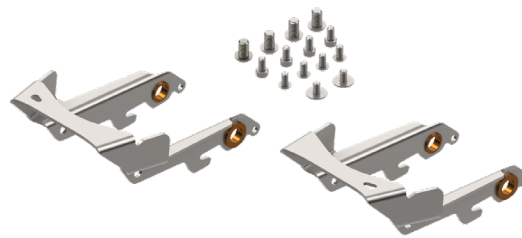

ACCESSORIES

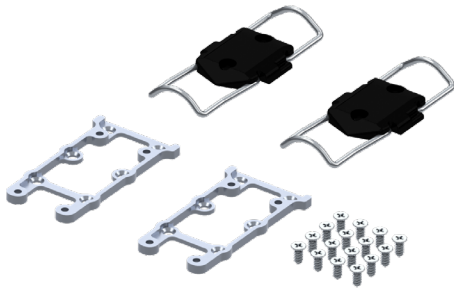

NTN UPGRADE KITS

No need to buy a new binding, if you want to make the switch from 75mm "duck bill" to NTN boots, simply unbolt your BMFs from your switch plate and bring them to an authorized Bishop dealer. Boom! You have a new binding.

75MM UPGRADE KITS

Don't like your NTN boots? If you want to make the switch from NTN boots back to you comfy, tried and true 75mm "duck bill", simply unbolt your BMFs from your switch plate and bring them to an authorized dealer or send them to Bishop. Boom! you are old school and happy.

SWITCH KITS

Every BMF binding is mounted to the ski with this system. Heavy Duty Switch Plate Technology™ with Spirallock® threads for quick and secure transfer across multiple pairs of skis.

The BMF HD Switch Kit allows you to quickly transfer your bindings between multiple pairs of skis in a few minutes. Invest in one burly beautiful Bishop binding and spread the love across your entire quiver, almost cutting the cost in half or more. No need to have a pair of bindings for each set of skis.

The BMF/R Switch Kit comes with climbing wires, and the BMF/3 Switch Kit does not. You can not use climbing wires with the resort oriented BMF/3 binding.

BMF BRAKES

Bishop telemark ski brakes can be easily installed or removed with two screws that hold the brake cover in place on the binding. Four brake sizes (90mm, 100mm, 115mm, and 125mm) to choose from to fit your rig. Choose a brake that is the same width of your ski under foot, or up to 8mm smaller as it is possible to bend the brakes out a bit for a ski that is a few millimeters wider than the brake. This gets the brake as close as possible to the ski edge without interfering.

Sold as a pair of two (2) brakes.

BINDING BUTTER

Keep your Bishops running smooth and fast with our low temperature grease specially formulated for snowy cold conditions.

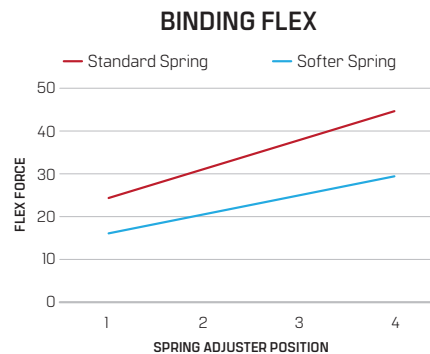

Bishop telemark bindings are high performance precision pieces of equipment, and need a little maintenance love every so often. This low temperature grease is used on the Main Springs, Touring and main pivot of the BMFs, and on the Bishop 2.0 at the main pivot and bolts that attach the Heel Bail to the Heel Pad. In addition, it can also be used on the outside of the Main Tubes and on bottom of the Rear Case in very cold conditions to reduce icing.

BMF SOFTER SPRING KIT

There is no “right” way to tele, and we love that! Everybody is different, and if you’re a lighter skier or just love lighter pressure to bend the knee, we’ve developed a softer and more responsive spring to customize your new bindings to your turn. Four pre-buttered springs and improved spring plugs are included.

These springs are 30% softer than our standard spring. They will give you a lighter feel, quicker lead changes, and allow you to flex your bindings a bit further.
