

How to maintain your HuExtensions

5 Essential Tips

TIP 3. DON'T FORGET YOUR SLEEP BONNET OR SCARF

Just because your hair is braided underneath your extensions doesn't mean you can slack on your bonnet. The natural HuExtensions needs some TLC, too. A good tip is to two-strand twist your extensions at night. The Deep Wavy texture HuExtension clients will notice it gives the extensions a great definition and helps keep the hair from tangling at night. Straight hair extensions can do a good old fashion wrapping technique (watch video below). Another idea is flexi rods, or even a Curl Band (www.curlband.com)! Just don't forget your bonnet.

TIP 4. LEAVE-OUT CLIENTS NEED TO BRAID IT DOWN

If your install has a leave-out, you should be braiding or twisting it out of the way at night. The friction of the extensions and your natural tresses can cause minor breakage. To avoid your leave-out from being shorter than it is, braid down your leave-out and apply your scarf to hold it in place as you sleep.

TIP 5. THE LESS HEAT, THE BETTER

HuExtensions are real human hair that is very similar to our own, natural hair. It needs trims, deep conditioning treatments and not a lot of heat. To keep your extensions looking good for a long time try rods, curl formers, or wash and go's. Straight extensions can require the most heat. Since the extensions are straight already, it doesn't take much to heat style them. Also, consider a Huetiful Extension Maintenance Service every 2 to 3 weeks at the salon so that we can professionally infuse hydration into both your extensions and hair.

Now that the tips are out, I hope they are helpful and can add some ease to your routine. Extensions can be lots of fun. They are a great investment. We want your HuExtensions to last 18 months so that you can get the most value out of them. With these steps you, should exceed well past that and have your extensions for two years.
