The power of project leadership

Mondid.io

The Company

1. What is mondid?

We are a boutique software house (focused on the client, best quality of the service, lots of attention to the client and their product, customized approach etc)

We are a client oriented, quality focused and problem solving aimed people who love challenging tasks.

We want our clients to feel safe and taken care of during working with us, we combine software knowledge with business experience in different fields. We have a holistic approach to every project treating it as our own and putting our whole hearts into our work and relations with clients.

We value transparency and trust. Strong reporting structure which relies on the clients needs and expectations

We think of our project more as users than the developers Because of the holistic approach we can advise and recommend the best software/business solutions. We think on behalf of the client and the user

We will help our clients in developing a craft, modern, performant, thoughtfully-tested and well-documented backend systems as well as other components of a software project.

We value relations. We are small which we consider as our big advantage. It enables us to be flexible, dedicated and engaged. We want our clients to feel like we are one team, that we will take care of their interests as if we are taking care of ours. We want to create a homely atmosphere.

We can offer a niche expertise, consultant services, building products from scratch, code review, mentoring, fixing problems, rewriting white labels

We concentrate on the delivery result. We focus on the clients support in any aspect and stage of cooperation.

We have a flexible approach towards contracting (we can offer our work as a service, we can become part of their team, we can become some kind of an "software investor")

We combine software knowledge with business skills, this is why we know

We want to democratize the access to software. The purpose of our existence is to make software more accessible to smaller enterprises
Mondid is created for people who need software to improve your business or for people who needs to improve their business software

What can we offer to:
EARLY STARTUPS
- building softwave, mvp, front end, back end, graphics
LATE STAGE STARTUPS-
   · 	Consulting
   · 	Implementing production pipelines
   · 	Restructuring codebases
   · 	 Implement best engineer practices, reviewing the code
   · 	Technology Auditing (for investors)
   · 	Mentoring the workers
   · 	API
We provide software services
Increase their productivitiy
CORPORATIONS
    - to modernize their technology

The problem that most of the companies have right now with this kind of service is that you cannot really communicate that well and

that efficiently with those who are in charge of developing the project. We focus on relationships , empathising with the business. We communicate directly on unbreakable connection. Solving communication issues which is one of the biggest sources of financial losses in companies.

Normally business people talk to business people and the business people talk to project managers, who are not business nor technical and those project managers talk to developers. As for we have experience in both fields we combine those two worlds making it more understandable for decision making people.

We will translate business language to the technical language and vice versa.

KEY WORDS:
    boutique
    software craftsmanship
    trust and transparency
    individual approach
    quality
    relations
    business-technical translations
    small company with soul
    problem solving
    flexibility

Database: mongodb
Language: typescript/Javascript/
Execution enviorment: Node.js

What kind of a message to we want to deliver through our website?

We are unique (as boutique hotels), we are creative (art and architecture elements is something we want to have as elements of our website, especially Zaha Hadid style)

Clients can trust us, we are flexible and we will always treat our clients projects as our own ones.
The projects delivery path will be very transparent from our site, we will work closely with the clients to give him exactly what he wants, and we will do everything to help him discover what he needs.
