

Old Emulsion Logo, the em as a kitchen whisk shape it's dynamic, it's make sense because with emulsion you choose to move, progress, work on your restaurant for better results.

The emulsion team is in a strong field involvement. Il like the «em» but the typo is poor and the logo isn't really strong and professionnal.

Nice design effect on colors and texture, link between letters, love it

I like the naolink typeface because it is modern and technological, it has a strong personality, it is not neutral, and it is also very human because with rounded and organic shapes.

It is slender and elegant but without being upscale or luxurious. It is connected to the ground, slender, human and sharp (angles which can evoke competence, precision, expertise).

I would like the same typeface or the same style, we need a ypeface with a lot of personality while reassuring.

I like the color gradient style (not colors) and the modernity of the icon

Some inspiration

I really like this typo too

I like the logo i have made, but I need a stronger design performance.
I like the typo I found, but I prefer the Naolink typo

Emulsion digitale

The typo name I used is Quantify, but it's not looking good on all letters I just use the E and the d.

Can you find a typo in same spirit than naolink, or create one I'm ok to buy a fond if it's really good.
I think the typo is the most important in a logo.

For Emulsion, maybe we can have an icon with «em» for emulsion the consulting and learning activity
«ed» for emulsion digitale the digitale marketing activity

For the icon I will like to try round shape, 6 angles shape and this kind of shape :

What do you think ? I would like to have an Icon who make sens with the name Emulsion, so we need the idea of movement, action, mixing elements, evolution (we can discuss it)

For colors, i like this combination, but ok to have your ideas

So for your design work, please follow this ideas, but I need your ideas and design skills please

Color gradient and try with texture like nk of naolink, because an Emulsion is a

Try round, 6 sides and DAN like shape

Color gradient

Typo like naolink, typo work to have a nice Ed or ed and a nice EM or em
