

These are 'signature' tracks of a positron-electron pair in a magnetic field. See also [What is Positron Interaction - Definition \(radiation-dosimetry.org\)](http://radiation-dosimetry.org). Careful! Some people may see a penis in it.

An idea could therefore be to use only this part of the picture

As positrons in an electric field separate themselves from electrons (they go in the opposite direction), an idea could be to visualize that in the above way.
