

Specs: Full color dragon, full forearm design. Dragon modeled to look like it is perched on the arm with its wings wrapped around. The dragon type is like the ones from Game of Thrones with wings and no forelegs.

I had some initial work done to produce a stencil but I was not completely satisfied with the results.

What I don't like about it:

- Front of the body appears twisted in the opposite direction than the rear of the body
- I don't need all the cracks in the ground, the idea is for it to look like it is perched on my arm, not on the side of a volcano
- I wanted the dragon to look like it is using its wings to wrap around the arm as if it is anchoring itself. In the stencil, the wings sort of span the length of the forearm.

This is another design that I found that has feature that the first one lacks

I like this one because of the shading and because it looks like it is perched.

I don't like how the Leg is hanging down like a dragon in flight rather than gripping the skin
