

Daemon 3D print is a new company set up to sell 3D printers– of various technology types – 3D print consumables, accessories and associated products.via a webshop. Target market is both B2C & B2B.

We do not want the logo to represent any one specific 3D print technology but to give an impression of hi-tech 3D print technology in general.

We are looking for a logo to represent our Company - Daemon 3D Print, and to set the colour scheme and cement the brand for all of our webshop customer screens and printed documents. It would be acceptable for the logo to have variants between the one used on the screen and one used on printed media as long as the logo variants were clearly of the same thing.

Our URL is www.daemon3dprint.com, and we do from time to time use name variations of:

- Daemon 3D Print,
- Daemon3D
- D3D

to represent ourselves to the customer.

The logo will be used to set colour scheme on the Magento webshop that is currently under construction, We have selected the Magento 'theme' at the following link for the 3D print webshop.

<http://www.templatemonster.com/demo/52324.html>

We do not want to dictate any particular colour or logo types, but obviously the key concept involved is 3D – and we expect this to be fundamental to any logo submitted. The colour scheme needs to be modern and to 'lift' the screen and printed page that it is on.
