

Training

*Experts in training for
clinical and commercial
manufacturing skills
and GXP functions*

Smart Consulting Group – Training Program

At Smart Consulting Group we have a significant commitment to training in both technical skills and GXP functions.

Our philosophy is grounded in the belief that repetition is the mother of skill and so we design our courses and course material to be used in formats that will reinforce course principles and create good habits.

We are visually oriented as a company so we strongly advocate the use of visual aids for training, training materials and around the workplace. We all know a picture is worth 1000 words and as such, we strongly advocate visual SOPs (picture-oriented), in relation to skills training.

Where appropriate, we use a variety of games to reinforce the key points which fosters both greater interest as well as a more focused understanding of the material and principles being shared. We can provide small group auditorium training on-site or offsite depending upon where you require our services.

We can deliver custom courses to meet your specific training needs or deliver training on the following topics:

- cGMP concepts and implementation
- good laboratory practices GLP
- QC laboratory management
- analytical methods validation
- root cause analysis/statistical analysis
- corrective and preventive actions
- validation master planning process
- validation and cleaning validation
- CMC
- aseptic manufacturing validation of sterile processes
- quality systems for medical devices

...and much more!

Through our Smart Learning Academy we aim to provide a significant level of influence to help transform our clients' businesses through the development and manufacture of valuable products.
