## ***IT IS A MATTER OF TRUST***

Based on the past 24 years of experience in working with the Canadian Government we realized that **first and foremost the client requires a quality cartridge** regardless of the financial savings this product can bring and **second that the users are skeptical that a Canadian remanufactured product can deliver the quality they justifiably require**

Based on these requirements our challenges were clear:

- 1) **Produce a cartridge which has the same technical specifications as an original cartridge and in the same time offer important savings and other advantages to the user.**
- 2) **Through quality and service create a business environment which can earn the trust of the users towards our remanufactured cartridges.**

In order to meet these challenges we took the following concrete measures:

- 1) **Canadian Government Quality Certifications :**

**Registered and completed Canadian General Standards Board Qualitfication Program for Remanufactured Cartridges Standard No. CANCGSB - 53 .148 - 2011**

**Qualified Product Listing No. 72041**

**Registered and completed the ISO 9001:2008 Certification**

- 2) **The creation of an interactive web site at [www.SISTEKDATA.com](http://www.SISTEKDATA.com) whose purpose is to visually introduce you to our production methods, quality control measures as well as our corporate mission with regard to environment and employment.**

We are hopeful that these measures will be able to dissipate any doubts about our remanufactured cartridges that they will help you in your decision making process.
