BEHR 
GOOD. BETTER. BEHR.™

- 1 DOOR CORE**
Our 100% High-Density CFC Free doors provide 6 times the insulation of a traditional wood door. The advanced PU door core material also adds to the doors sound proofing elements.
- 2 LVL LUMBER COMPONENTS**
We use laminated veneer lumber (LVL) on both side styles for uniform dimensions and moisture resistance. Components are reliable, stress-free and stronger than traditional lumber components ensuring they won't warp like wood.
- 3 COMPOSITE TOP & BOTTOM RAILS**
Our strong composite material top and bottom rails are waterproof to prevent moisture from entering the door case. The bottom rails are designed to accommodate a large range of door sweeps.
- 4 LOCK BLOCKS**
Extended lock block allows for an extensive range of door lock hardware installation. With 4" of full length LVL, it provides extra security against forced entry.
- 5 SURFACE TEXTURE**
The use of superior mahogany and oak skin graphic techniques allow for "High Definition Panel Embossments" which provides an authentic looking stained wood finish. We capture the feel and warm texture of real wood without the disadvantages of natural wood deterioration.
- 6 PANEL DESIGN**
Our panel designs easily meet both the demanding contractor and customer concerns. The elegantly detailed architectural panels feature deep shadow lines that add to any home's strong curb appeal.
