[Developer's Page] Layout Example
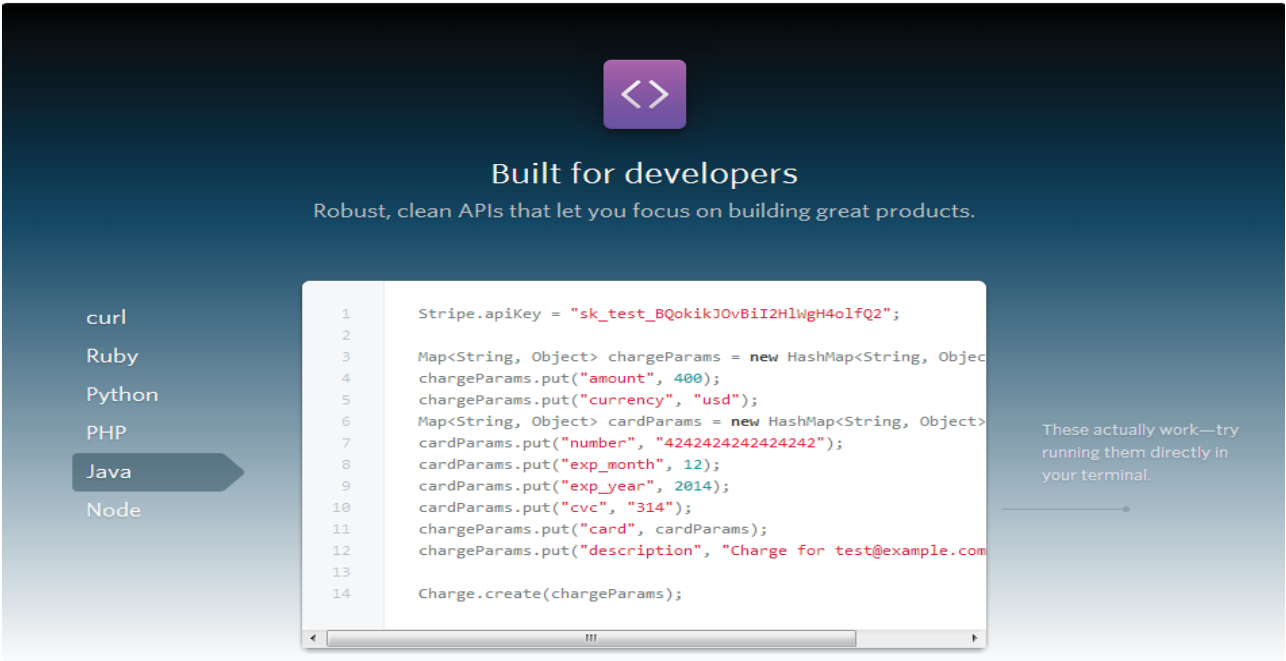

A Graphic something like below for the developer's menu tab link / home page

Built for developers
Robust, clean APIs that let you focus on building great products.

```
curl
Ruby
Python
PHP
Java
Node
```

```
1    Stripe.apiKey = "sk_test_BQokikJOvBiI2HlWgH4olfQ2";
2
3    Map<String, Object> chargeParams = new HashMap<String, Objec
4    chargeParams.put("amount", 400);
5    chargeParams.put("currency", "usd");
6    Map<String, Object> cardParams = new HashMap<String, Object>
7    cardParams.put("number", "4242424242424242");
8    cardParams.put("exp_month", 12);
9    cardParams.put("exp_year", 2014);
10   cardParams.put("cvc", "314");
11   chargeParams.put("card", cardParams);
12   chargeParams.put("description", "Charge for test@example.com
13
14   Charge.create(chargeParams);
```

These actually work—try running them directly in your terminal.

An interactive graphic that allows prospective developers to view between examples of code by switching between languages on one side. We need to be able to edit the content of the sample code as well as the languages that appear on the side.

Protection for your application
We manage fraud and chargebacks, and we shield your application from the regulatory burdens associated with payment processing.

Built to give you control
WePay supports a frictionless user-experience for both buyers and sellers on your platform. We keep your users on your website.

Live support
Live customer support for your team and your users. Get help from real people when you need it.
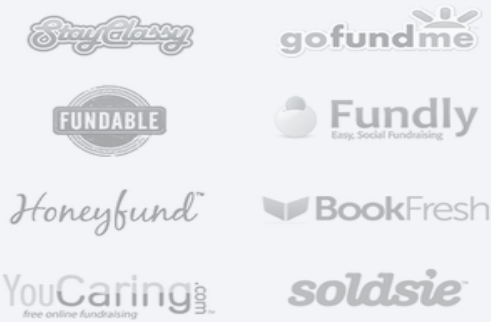

Your Buyers

Your Marketplace

wePAY

Your Sellers

A payment infrastructure built for your users. Simply plug it in.

Instant payment acceptance
Your users can start accepting payments instantly.

Easy PCI
We help you avoid or reduce the scope of PCI compliance.

Fully compliant
Never touch customer funds; avoid financial and regulatory liability.

Collect transaction fees
Add fees to payments processed on your platform.

Store credit cards
Your users only have to enter their payment information once.

Simple payouts
We deposit funds directly into your seller's bank account.

Our customers

Crowdfunding & fundraising
Platforms that help people or organizations raise money.

Marketplaces
Platforms that help connect buyers and sellers.

Business tools
Store builders, scheduling software, invoicing, email marketing, etc.

Allow your users to accept payments on your platform
We shield your application from the regulatory burdens associated with payment processing while keeping your users on your website.

Explore the documentation

Some type of main content structure where we can easily swap images in and out depending on what content we want in that area. Also a segment where we can incorporate a process flow diagram/illustration. Having an area to display some of our customers will not be as imporant to us as it is shown above.
