# Splash Screen

This is the screen that shows while loading up. As soon as games are available, we fade to the next screen.

# Games

With pull-to-refresh, this view shows all of the games that have been saved by this particular user, or shared with this user.
Pressing the soccer ball in the center of the screen adds a new game to the list.

# New Game/
# Edit Game

Whenever a new game is needed, or an existing game is edited, this view allows the user to edit properties, like choosing home & away teams, number of periods, duration of a period, etc.
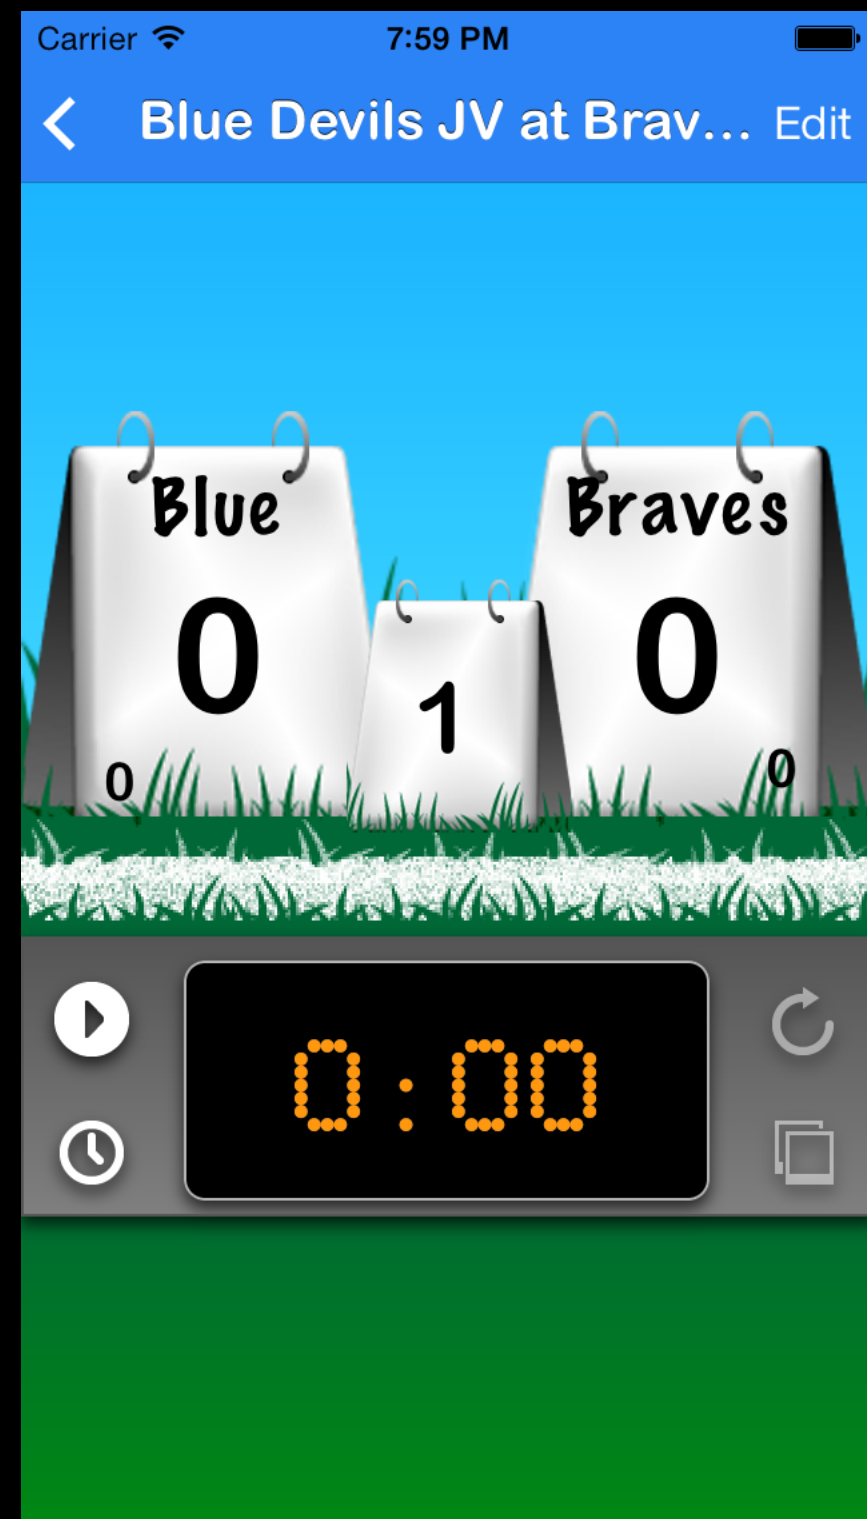

# Score View

The score view allows the parent to keep score during a game, or to review scores after a game has ended.
Parents can quickly update scores without missing the game by flicking up & down on the scorecards.
The view on bottom is a stopwatch with controls for starting/stopping the game, setting time, or viewing photos taken during the game.
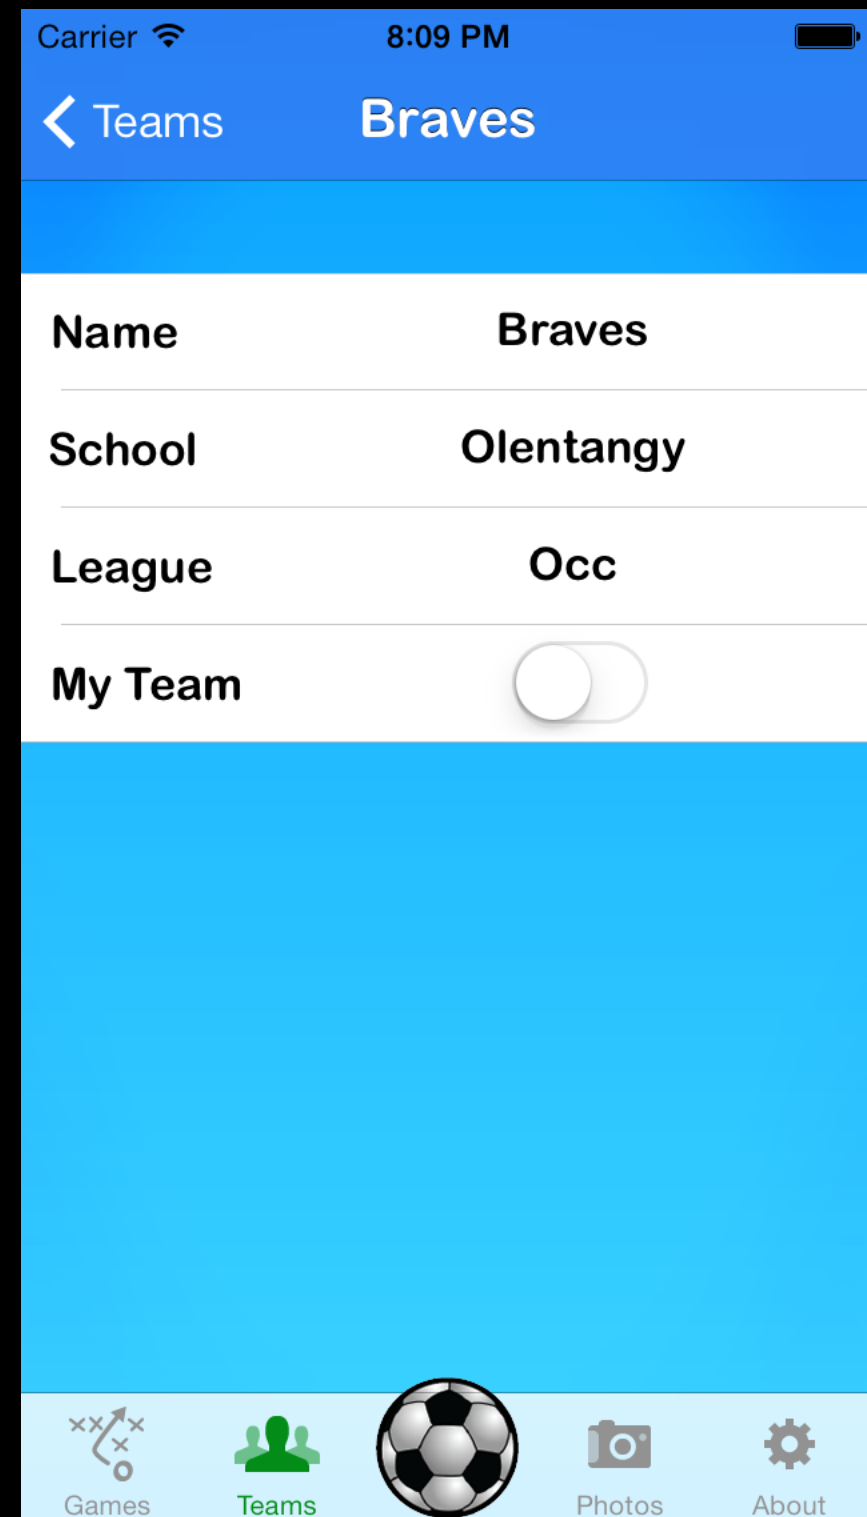

# Teams

The teams view lists all teams that the current parent has access to. Touching one of the teams opens up the team edit view.
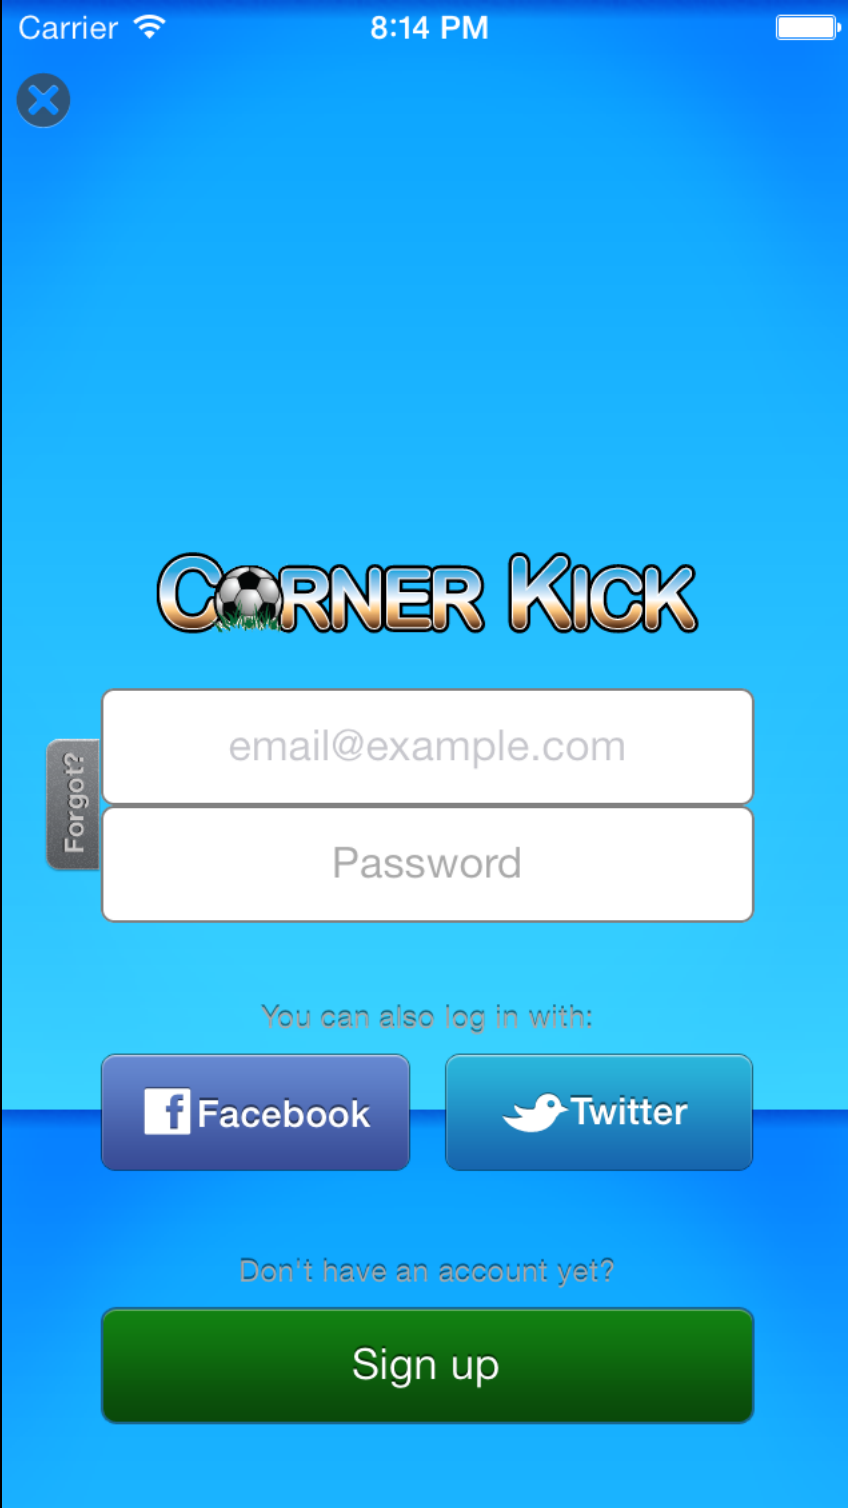

# Team Edit

The team view gives users a chance to edit details about particular teams in the league, whether your team or not.

# Sign In/Up

This is an adaptation of the standard parse.com login view, adapted for Cornerkick.  Seriously could use help with design on this.
