COSMETIC SKINCARE

VISIA COMPLEXION ANALYSIS

Your initial consultation begins with the VISIA complexion analysis, which is a unique imaging system that provides a clear, multi-dimensional portrait of your skin. This system highlights individual aspects of your complexion that contribute to your overall appearance.

The VISIA utilizes daylight and UV light to capture key visual information from six areas affecting complexion health and appearance: wrinkles, spots, pores, texture, bacteria and UV spots. The VISIA also provides an objective comparison of your complexion's characteristics to those of other people your same age. This comprehensive information enables our team to source the best treatments, skincare regimen and supplements that are exclusive for your needs.

MEDICAL GRADE SKIN PEELS

We have a variety of medical grade skin peels that can be tailored to meet your individual needs. All of the peels we offer treat a wide range of skin conditions, making it the perfect solution for individuals with multiple concerns.

BOTOX

Not only do we use BOTOX in the traditional fashions, we have advanced techniques to meet a variety of needs.

IPL PHOTOREJUVENATION

Intense pulsed light can be used to treat a wide array of skin conditions including, lax skin, brown spots, spider veins, acne, redness and unwanted facial hair.

FACIAL FILLERS

We use a wide range of fillers to perform liquid facelifts, fill in unwanted lines and re-contour the face. Thus, providing a more youthful appearance.

PELLEVE

solovisoMD was the first in the Inland Empire to offer the Pelleve skin tightening system. Pelleve utilizes radio frequency waves to tighten and lift facial skin without any down time. This treatment can be used on all skin types and does not cause peeling or bruising.

FRACTIONAL CO2 LASER

For the more stubborn lines and wrinkles the fractional CO2 laser is the most preferred treatment of choice. This laser can also be used to treat acne scars and pigment disorders.
