We will help you determine the right frameworks for your business.

TOOIT specializes in the most popular open source content management systems (CMS) being used today.

Wordpress is a free and open source blogging tool and a content management system (CMS) based on PHP and MySQL, which runs on a web hosting service. Features include a plug-in architecture and a template system.
WordPress is the most popular blogging system in use on the Web, at more than 60 million websites.

Drupal is a free and open-source content management framework written in PHP and distributed under the GNU General Public License.

The standard release of Drupal, known as Drupal core, contains basic features common to content management systems. These include user account registration and maintenance, menu management, RSS feeds, page layout customization, and system administration. The Drupal core installation can be used as a simple website, a single- or multi-user blog, an Internet forum, or a community website providing for user-generated content.

Laravel is a free, open-source PHP web application framework, intended for development of MVC web applications. Laravel is released under the MIT license, with its source code hosted on GitHub.

According to a December 2013 survey on PHP frameworks popularity, Laravel is listed as one of the most promising PHP frameworks for 2014.

Meteore is an open-source JavaScript web application framework. It was first introduced in December 2011 under the name Skybreak. At its core is the Distributed Data Protocol. Its release was the largest in Hacker News history. Among open source projects, it is also the third most starred GitHub repository in 2012.

About TOOIT

We create customized web applications to help your business work smarter and more efficiently, whether locally or globally.

We understand the challenges you face and we customize solutions just for you.
