

BPI has over 20 years of experience specifically with regulated products that are used to support the direct manufacturing of your most critical products. From disinfectants to the application and removal process (mops & wipers), critical PPE (apparel, gloves, respiratory), equipment (stainless steel, EM support), BPI offers a wide range of products to improve the effectiveness of your processes while reducing risks associated with cross-contamination, micro-organisms, and endotoxins in your clean/aseptic environment.

Focus

BPI understands the climate around the changing regulatory dynamics surrounding the pharmaceutical and medical device industry. We have designed and implemented products, processes and procedures to ensure our company enhances your quality systems.

Recall Capability

BPI has full lot recall capability on sterile products. In the unlikely event of a product quality issue, you will receive formal notification.

Lot Traceability

Each sterile product has a lot number enabling complete tracking of the manufacturing process.

Documented Validation Protocols

Our sterile products include lot specific certificates of irradiation which are backed by a validated protocol.

Limited Lot Numbers

BPI strives to simplify the receiving and lot management process for you by limiting the number of lots per shipment.

Suite Technology

Self manufactured specialty products designed to meet emerging needs of the pharmaceutical industry.
