Virtual Implant Surgery * 3D Digital Imaging * Lower Radiation Exposure
Service Mapping * Cutting Edge Tech

Effective Technologies For Business Success

Today's patients demand the most advanced dental care. Three-dimensional images (cone beam) guide your patients to a better understanding of your diagnoses, increasing their trust in you and increasing treatment plan acceptance.

With 3D cone beam from Advanced 3D Mobile Imaging, you will also increase the clinical safety in the cases of difficult diagnoses and you will encounter new possibilities in implantology. Enjoy every day. With comfort, knowing that your patients are getting the care they deserve.

“....Advanced 3D Mobile Imaging have greatly enhanced my practice and ability to diagnose and treat difficult cases...”

Brett T. Laggan, DDS;
Northwest Florida OMS

Florida's most advanced imaging centers for the face, teeth and jaws. At Advanced 3D Mobile imaging, we utilize the latest state of the art equipment available, which permits the lowest radiation dose possible, while producing the clearest, highest detailed images for your doctor. Our imaging centers use modern sterilization techniques, and the procedures are fast and painless. Advanced 3D Mobile Imaging has opened an imaging center in Northern Florida Panhandle.

Advanced 3D Mobile Imaging has been serving the dental and orthodontic communities. Our services include Cone Beam CT, digital photography with intraoral close-ups, panoramic projection x-rays, cephalograms, tomography and other standard medical, dental and orthodontic radiographic services.

By adding Advanced 3D Mobile Imaging to your practice, you gain a full imaging laboratory without giving up any office space. With our 3D Mobile Imaging facility utilizes a streamline layout for the fastest processing of patients in an open, relaxing atmosphere. A call to Advanced 3D Mobile Imaging today puts you in command of the best imaging equipment and a friendly, knowledgeable staff including a licensed radiologist if you desire.

Plan with confidence, treat with certainty

WHY A3DMI?

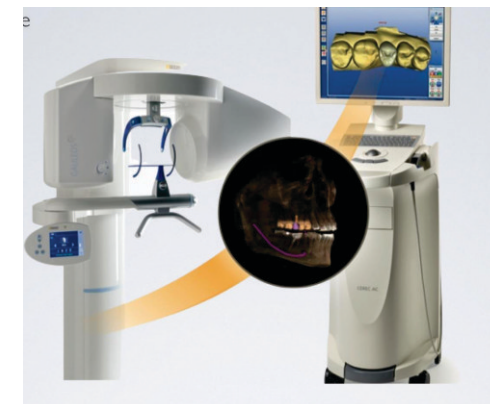

Whether you're just beginning treatment or evaluating the results, 3D ConeBeam x-ray images give your doctors more of the high quality, detailed visual information they want for diagnosis and planning. More complete information is a vital key to improved patient care. And for you, it can mean more confidence and satisfaction in your treatment.

HOW IS IT DIFFERENT?

Typical dental x-rays just focus on your teeth, and for each x-ray picture, you need one exposure. So it would take many exposures to even begin to compare to a single 3D ConeBeam scan. But 3D ConeBeam Imaging shows much more than simple "flat" x-rays. This new technology provides more complete visual information to study your case from every angle. Best of all, the original scan data can be duplicated anytime, to provide different specialists with images if needed later.

IMPLANTS

Presented is the case of a 45 year old male with a missing central incisor, tooth #9. The patient was scanned with the Galileos 3D Conebeam System to determine quality and quantity of bone. The treatment plan included the use of a Nobel Speedy Groovy 4.0 x 11.5 mm implant which was inserted using a completely guided approach with Nobel Guide instrumentation in conjunction with the SICAT Surgical Guide.

VALUE POINTS

- No pre-scan preparation required
- Quick, simple, completely painless
- A virtually infinite number of views from just one 14-second scan
- Lower radiation dose than conventional CT scans
- Gives the patient the confidence that their doctor has advanced, precise information to plan and monitor their treatment needs, improving Patient

By adding Advanced 3D Mobile Imaging to your practice, you gain a full imaging laboratory without giving up office space. A call to A3DMI today puts you in command of the best imaging equipment and a friendly, knowledgeable staff.

GALILEOS

As the first comprehensive 3D digital diagnostic and treatment solution, GALILEOS combines X-ray imaging, visualization, diagnosis, planning and surgical guide implementation into an integrated and time-saving process. One scan provides every detail

A single 14-second scan is all that is required to provide all of the clinical views necessary for making informed diagnoses and confident treatment plans from start to finish.
