- Workflow Design
- Process Improvement
- Project Management

- Data Modelling
- Spatial Data Management
- Software Development
- Geographic Information Systems

EMPLOYMENT SYNOPSIS AND OBJECTIVES

I have worked as a self-employed contractor/consultant since April 1998 and I continue to enjoy it. However I am not averse to the prospect of re-entering full time employment if the right opportunity comes up. I also remain on the lookout for business development opportunities within the ICT sector.

I have discovered that I have an optimistic streak when it comes to my work. I embrace different projects, roles and environments with enthusiasm and gusto. This has stood me in good stead with my clients and employers. However it has also led me to take on some roles that, in hindsight, have drained me more than I would have liked.

At this point in my career, I would like to be more selective in the projects and roles that I take on. I would like to direct my enthusiasm and energy in those directions and towards those causes that I will look back on with satisfaction.

I want to be part of something that will make my kids proud.
