

## Icons specifications

### Project overview

We need a set of icons for an application with standard icon types (add element, remove element, edit element) and non-standard icon types (SMS Templates, Head Station, Interface, Zone and others).

This application is a proprietary system for global management for an Internet carrier, fully customized for the customer.

See the attachment PDF for the exact description for each icon and an example of the current used icon.

The icons would be in this kind of look and feel.

The back color would be different, and alpha layers must be used.

**List of icons we need (The icons presented are currently used in our existing application, and are for example purpose only)**

Detail

To have the detail of an element

Add

To add an element to a list

Delete

To delete an element from a list

Export to file

To makes an export to a file

Import from file

To makes an import from a file

Upload

To upload list of elements

View document

To view a document stored in the database

View graphics

To view the graphics of a modem

	Lock an element	To lock an element
